Partner with Emergi-Lite[®] for expertise, reliability, and innovation

As a part of ABB, Emergi-Lite® emergency lighting products and services are specifically designed to provide the utmost protection and safety.

We are continuously enhancing our products to meet the evolving needs of our customers by investing in the latest manufacturing technologies as well as developing solutions that maximize efficiency and customer satisfaction. We have also invested in IoT platforms for our emergency lighting that will build a foundation for our future ecosystems taking building safety to the next level.

Emergency lighting experts

Our mechanical, electrical and software engineering teams work together to create unparalleled products through research and innovation. The entire operations team is centralized for maximum collaboration from initial design to final assembly and testing.

Product reliability and efficiency

Quality, safety, ease of installation, and long-term reliability are designed into each product. Our products go through rigorous testing while meeting quality and performance standards at every step of the process from design to production to fulfillment.

Manufacturing Center of Excellence

Most of our life safety equipment is designed, manufactured and distributed from our North American facility located in Montreal, Quebec. With over 150 people on our manufacturing team, we have complete control over lead time, service, and quality.

Bringing peace of mind through reliable safety solutions.

Fast delivery

No need to wait for a large production run or overseas shipment, we produce each product in-house. Our manufacturing capabilities include plastic components, metal binding, circuit boards, and final assembly, including small inverters. We produce precisely what we need without waiting for a large production run or overseas shipment.

Fuelled by the creativity, innovation and commitment of every employee, the Emergi-Lite[®] facility is a Centre of Excellence in emergency lighting.

Since 2001, the Emergi-Lite® manufacturing facility has been ISO 9001 compliant.

Always at your service

Our customer service team is dedicated to ensuring satisfaction. With comprehensive engineering, manufacturing, and testing resources available at our Center of Excellence, we are committed to providing solutions.

The AOI (automated optical inspection) machine added to our printed circuit board operation is one of the first of its kind in use in North America.

High output MR16 LED Emergency lighting

MR16 LED Illumination

Light-emitting diode (LED) is becoming the preferred solution in lighting applications. The emergency lighting industry is no exception. Today, virtually every new product introduced to the market includes "white light" LEDs for emergency illumination. Extremely efficient and long-lasting, LED lamps become natural alternatives to incandescent lamps due to three main advantages:

- Lamp efficacy: 50–100 lumens per watt compared to 15–30 lumens per watt of the best halogen lamp. Allowing for smaller batteries and units and/or remote capacity
- **Operational life:** 30,000+ hours, equivalent to a lifetime warranty in emergency lighting.
- Lower lamp temperature: 80–120°C (176–248°F) is a huge benefit for lighting in hazardous locations.

MR16 LED lamp benefits

- CSA C22.2 No. 141 certified.
- Reduces total cost of ownership, uses fewer fixtures due to superior illumination, thus reducing installations costs and future maintenance of the entire system.
- UL-recognized components.
- Available for standard battery voltages 6V, 12V, and 24V as well as 120V operation.
- Energy-efficient LED MR16 lamp provides equivalent lighting performance to a much higher watt halogen MR16 lamp.
- Reduces required battery capacity by 75%, for battery units and remote heads.
- Small profile, compact white lighting is ideal for architectural applications.
- Vibration-resistant LED stands up to industrial environments.
- Ideal for indoor and outdoor use.

200-220-Lumen 4W MR16 LED Leading the technology trend, we offer a

complete series of 4W MR16 LED lamps available for all the standard battery voltages: 6V, 12V, 24V and 120V. With a luminous flux of typically 200 to 220 lumens, they are available with most emergency heads designed to hold an MR16 lamp and meet the majority of illumination specifications.

340-Lumen 5W MR16 LED Keeping pace with technology, in 2012 we introduced a 12V-5W MR16 LED lamp.

Introduced a 12V-5W MR16 LED lamp. With a typical luminous flux of 340 lumens, the 12V-5W MR16 LED lamp has the same lighting performance as a 20W high-output halogen MR16. 6V-5W MR16 has been introduced in January 2020. A twin emergency head installed at a height of 7.5ft illuminates 70ft path of egress 70ft.

540-590 Lumen 6W MR16 LED

A 6W MR16 LED lamp delivers up to 590 lumens for an average spacing in emergency lighting of 106 feet with an efficacy of 98.3 Lm/w, it is over 6 times the efficacy of an MR16 35W halogen with a similar light output. This lamp can deliver the highest linear foot of illumination per watt on a path of egress (spacing in ft/watt) 8.83ft compared to 1.37ft for an MR16 35W.

Highly efficient LEDs provide many cost-saving benefits

Case study: Fewer MR16 LED units required

Emergency lighting units with MR16 LED lamps provide the same illumination at floor level using significantly fewer units.

- Reduced installation costs due to reduced product and labour requirements.
- Reduced energy costs keeping fewer batteries charged at full capacity to be ready to respond to an emergency at any time.
- Reduced maintenance and testing costs with fewer units to maintain and test in the Emergency Lighting System.
- Reduced lamp replacement costs as LED lamps have a 30,000+ hour lamp life compared to only a few hundred hours typical with incandescent lamps.
- Reduced Environmental Impact, fewer product materials, fewer batteries, less transportation, less packaging, less labour and less waste.

Compare

Where the building code requires a minimum of 1 foot-candle and a minimum of 0.1 foot-candle at floor level along the path of egress on a 150' x 9' x 9' corridor with an egress door at one end, a 150' x 6' path of egress, and a 7.5' unit mounting height.

Nexus[®] Emergency lighting monitoring system

Building and Life Safety Codes oblige building owners/managers to ensure the safe evacuation of a building in the event of an emergency.

01 Nexus® is a proven system supported by a 5-year warranty, and can contribute to LEED certification and support green building initiatives.

Are you prepared for an emergency?

As with most safety equipment, emergency lighting is not fully appreciated until they are needed. In the interest of public safety, it is imperative to routinely monitor and test emergency lighting to ensure they are fully functional and provide adequate lighting to illuminate the path of egress and guidance to safety. Building owners or managers must meet the outlined requirements for exit signs and emergency lighting equipment, including the following:

- Conduct a functional test every month
- · Conduct functional tests annually
- Keep a logbook of maintenance information

Complying with these requirements can be labour-intensive and costly, especially in large buildings where every emergency fixture needs to be tested manually.

Manage testing with Nexus® to save time and costs

Nexus® is a real-time monitoring system that manages the status of your entire emergency lighting system from a central control unit. Nexus® runs diagnostics, performs required monthly and annual functional tests, generate maintenance logs and runs compliance reports. Available in wired or wireless versions, Nexus® helps increase system reliability and performance while reducing the risk of failed inspections. With Nexus®, monthly tests and reports on the status of all emergency lights can be done individually or in groups.

Maximize system availability

By allowing maintenance personnel to easily maintain and monitor an emergency lighting system without having to manually check each unit, Nexus® reduces the hours required to disrupt the power supply for inspections. Nexus® also saves time and operational costs by indicating the location of a faulty unit and reports it instantly without requiring a manual search.

Update status instantly

Nexus® works by communicating with the emergency units and a centrally located controller. Messages are passed between the unit and the controller to instruct them to perform all mandatory testing and for continuous monitoring.

One building or a group of properties under the same management can be monitored with Nexus[®].

Small system example

In a system with 100 units or less, it is likely that the only hardware required, besides emergency units, is a controller. All communication would occur wirelessly, and installation is as easy in a non-monitored system.

Building sizing does not restrict Nexus[®]. The system's flexibility enables different configurations and layouts to be built based on customer needs without a problem as each unit needs to be able to communicate with its neighbouring units and does not need to communicate directly with the controller.

Large system example

The Nexus® RF system has been designed to be extremely flexible and provides for a range of system options. Each large site will need to be assessed for the best system solution with the assistance of ABB technical staff. The basic Nexus® RF system is designed to run on an Ethernet network which is present in most modern buildings.

Site performance will be optimized through the careful selection and router placement to form efficient clusters. Building layout and materials will also play some role in determining the best solution to deliver a highly effective means of testing and maintenance requirements.

Exit & pictogram signs

Table of contents Exit & pictogram signs

Exit & pictogram signs overview

Electrical Signs (connected to a source of power) differ from battery units as they must always be illuminated during normal AC operation, and not only upon loss of AC power. This has a direct impact on the acceptable energy consumption referenced in government regulations (National Resources Canada NRCan, CSA C22.2 No. 141), which is a maximum of 5W per legend single or double face.

A legend is defined as a single word, either "SORTIE" or "EXIT" or "PICTOGRAM" There are also bilingual exit signs with: "SORTIE EXIT" or "EXIT SORTIE", quite common in applications such as airports or federal buildings. A bilingual exit sign is acceptable up to a maximum of 10W. The legend must also meet visibility standards including dimensions, average brightness, uniformity, background contrast ratio. The most popular light source is based upon solid-state LED technology, which is capable of meeting both lumen output and energy efficiency requirements.

Back-lit and edge-lit exit signs

Two different methods are used to illuminate the legend. The most common is found in back-lit signs, which use a light source located behind the legend, illuminated through a diffuser panel. The other method uses a clear, white or mirrored acrylic face panel on which the legend is etched or silkscreened. The light source is installed in the top portion of the panel. Light is transmitted from the top edge of the panel, which is where the "Edge-Lit" Sign gets its name from. In general, back-lit Signs are more economical and provide a more uniform illumination of the legend. On the other hand, acrylic Edge-Lit Signs are considered more high-end, elegant fixtures.

Battery, remote, AC and other power sources

Three types of fixtures are available for emergency lighting applications. The first type is the Self-Powered Sign, with a rechargeable battery for emergency mode operation. Next is the Remote Sign or AC/DC Sign: in addition to a normal AC power supply, it includes a DC input (6VDC, 12VDC, etc.) for remote power supplied by a separate battery backup. Installation of such Signs requires DC wiring between both fixtures. Finally, the AC-only Signs are for applications where emergency power is supplied from an AC Central System. A variation on Sign design uses photo-luminescent materials for the legend (letters and/or background). According to the National Building Code, photo-luminescent signs must be continuously illuminated by a dedicated light source connected to an emergency power supply.

In addition to electrical Signs, there are power free, selfluminous signs that incorporate radioactive materials such as tritium gas as a light source. Their brightness level is very low, which is 2-3% of the minimum level required for an electrical sign. However, they are safer and easier to install in hazardous/explosion-proof environments such as coal mines, natural gas installations, etc. As these signs are not electrical signs, they are not subject to CSA standards such as C22.2 No. 141.

Combination units

The combination unit or "combo", includes both a small battery-powered Emergency Lighting unit and an AC/DC Sign. An economical and easy to install alternative (installs to a single electrical box), the combo offers both a Sign indicating the direction of egress as well as emergency lighting on the path of egress.

Explosion-proof environment signs

The CSA C860 standard applies to all Signs, and in all applications with no exceptions. Compliance is required in all cases, even if a solution may be hard to find. For example, equipment for use in hazardous locations, such as areas classified under Class I, Division 1 (or Class I, Zones 0 and 1), defined as locations where flammable gases, vapors or liquids are present frequently or under normal operating conditions.

Required luminaires are designed specifically to meet CSA standards for explosion-proof equipment. Heavy-duty luminaires are rated for lamp wattages ranging from 50-250W. Constructed of die-cast aluminum, the units feature a resistant prismatic glass globe providing hemispherical light distribution. Until now, because of these characteristics, traditional Signs were using 15-25W incandescent lamps to provide sufficient illumination of the legend. Conversely, an LED Sign is typically rectangular and We provide products that are designed for performance, reliability and cost efficiency by using innovative technology and extensive industry expertise.

relatively thin (4-8cm) with an axial light source consisting of a line of LEDs to provide indirect illumination of the legend through multiple reflections. So, how is it possible to develop an LED Sign that meets NRCan/C22.2 No. 141 using a bulky heavy-duty luminaire dedicated to hazardous locations Class I, Division 1?

We developed a special LED lamp series that is easy to install in the lamp base of explosion-proof type luminaires.

This special LED lamp consumes less than 5W in either AC or DC of high-performance LEDs configured in a unique pattern. Horizontal distribution is 360 degrees radially and vertical distribution is directly focused on the sign legend.

This innovative design meets the visibility criteria on standard size legends while limiting power consumption to between 3 to 4.7W per sign.

LED lamps are dedicated to various voltage ratings: 6V, 12V, 24V or 120V and operate on DC and AC, supplying power to the Sign from emergency lighting unit equipment or central AC or DC systems. Lamps are listed/certified CSA C-US to CSA T.I.L. B-69 and UL1993 standards for LED technologybased lamps or lamps with integral ballast. This further reinforces the assurance of performance and safety of the Signs using these lamps. The new Sign series includes fixtures designed for installation in all hazardous location classifications: Class I Divisions 1 and 2, Groups A, B, C, and D; Class II Divisions 1 and 2, Groups E, F, and G; Class III Divisions 1 and 2. Those specialized in industrial lighting can rest assured that they can specify certified hazardous location equipment also approved and compliant with NRCan/CSA C22.2 No. 141 standards. The new technology also significantly improves the maintained light output of the LED by utilizing materials that operate at lower temperatures than the previous generation of LEDs.

White LEDs

Following the requirements of the National Building Code, the new generation of exit signs has replaced the text legend (EXIT, SORTIE) with a pictogram legend featuring a green running silhouette on a white illuminated background. Consequently, the legend is now illuminated by white LEDs, which replace the traditional monochrome red or green LEDs.

White LEDs are increasingly being used in the lighting industry. Their operational life is defined by industry standards like LM80, as the time elapsed until the LED luminous flux decreases to 70% of the initial value (life definition: L70). Following the minimum requirements of the LM80 standard, LED manufacturers usually test their products for 6,000 hours (little longer than 8 months) and then predict the total operational life based on statistical methods and extrapolation. The LED chip is based on a compound of three elements: Indium, Gallium, and Nitrogen (InGaN) and generates a monochrome light wave of royalblue color. The white light emission is obtained by covering the chip with a layer containing mainly phosphor and three other elements: Yttrium, Aluminum, and Garnet silicate minerals (YAG). The InGaN-YAG technology has an estimated operational life of minimum of 50,000 hours before the light output decreases to 70% of the initial level.

Furthermore, the LEDs are powered by an ABB patented electronic circuit for constant direct current (CDC), specially designed to drive the LEDs for extended operational life.

To validate the design: in-house LED life tests commenced early in 2009, one year ahead of the adoption of the pictogram exit sign by the National Building Code. Data collected for 45,000 hours (five years+) of continuous operation indicate that LED light depreciation is less than 5% of the initial levels in 2009. This enables us to raise the statistical prediction of our LED life to at least 90,000 hours (over 10 years) of continuous operation to the L70 level.

The outstanding test results with the InGaN-YAG technology and patented LED drivers have allowed us to manufacture pictogram signs with maintained lighting performance. By design, the initial luminance levels of the legend exceed by 50% to 100% the minimum requirements of standard CSA C22.2 No.141-15. So, even after 10 years of continuous use, the projected luminance levels of the pictogram legend will still be compliant with the CSA standard of visibility.

EDE Series

Die-cast aluminum pictogram edge-lit sign

Features

- Self-powered models provide minimum 120 minutes of emergency lighting
- Die-cast aluminum construction
- Modular design offers great choice of architectural profiles
- Universal die-cast back-box for surface or semi-recessed mounting on ceilings or walls
- LED strip module can be rotated in the unit for either wall or ceiling mount
- Flat die-cast trim plate and galvanized steel back-box for recessed ceiling mount
- Clear acrylic panel with pictogram legend
- Comes standard with double-face panels for use in singleface and double-face applications
- White LED light source
- Universal AC input: two-wire 120 to 347VAC; universal DC input: two-wire 6 to 24VDC
- Energy efficient consumes less than 2.5W in AC and DC-remote modes
- Meets or exceeds CSA 22.2 No.141-15
- Special wording available (CSA C22.2 No. 250.0)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the **Emergi-Lite® EDE Series** of die-cast pictogram edge-lit signs.

When specified for surface mount, the unit shall come standard with a trim plate, trim ring, back box and canopy made of die-cast aluminum with ______ finish. The trim plate shall have a ______ profile and allow for wall or ceiling mount installation. The trim ring shall allow for semi-recessed installation in walls or ceilings with cavity. The canopy shall allow for wall, end, or ceiling mount.

When specified for recessed ceiling-mount, the unit shall come standard with a flat trim plate of die-cast aluminum with ______ finish, a back box of galvanized steel, and a hardware kit for back box installation between ceiling joists. The back box shall be provided with conduit knock-outs at the top, back and end.

All edge-lit units shall have the trim plate snap and lock in the housing with torsion spring retainers, thereby eliminating any visible screws or hardware. The legend shall be printed on a clear acrylic panel. The panel shall come standard with double-face legend, for single-face and double-face applications. The light source shall be long-life white light-emitting diodes (LED) and shall provide even illumination in normal and emergency operation. The edge-lit sign shall operate with universal 2-wire AC input voltage of 120 to 347VAC at less than 2.5W and universal 2-wire DC input voltage from 6 to 24VDC at less than 2.5W. The edge-lit sign in a self-powered configuration shall use a sealed nickel-cadmium battery of 2.4V nominal voltage and shall stay illuminated during emergency operation for at least two hours upon AC failure.

When specified, the self-powered unit shall include nonaudible auto-test functions, managed by a micro-controller: it shall execute automatic tests for 5 minutes every 30 days, 30 minutes every 60 days and two hours annually. When a fault is detected a red flashing LED shall identify the failure type: battery, charger circuitry, or LED lamps.

The edge-lit sign shall be listed CSA 22.2 No.141-15. The equipment shall be **Emergi-Lite**[®] model:

Power consumption

Model		AC specs		DC specs
AC-only	120 to 347VAC	Less than 2.5W	_	-
AC/DC standard	120 to 347VAC	Less than 2.5W	6 to 24VDC	Less than 2.5W
Self-powered	120 to 347VAC	Less than 3.5W	Nickel-cadmium battery	Minimum 2 hours
Self-powered diagnostic	120/347VAC	Less than 3.5W	Nickel-cadmium battery	Minimum 2 hours

Unlike EXIT signs, the pictogram sign is not available in double arrow configurations.

13

EX30 Series

Die-cast edge-lit exit sign

EXITEXT

Design upgrade

Introducing new features:

- Easier installation: component-free back-box housing and canopy can be installed in advance, like a regular junction box.
- 20 30% less power consumption: max. 1.4W (AC-only models) and max. 2.5W (self-powered)
- Bi-color LED pilot light allows visual diagnostic without need to open the unit (self-test and diagnostic option)
- Listed by CSA
- Also available with white LEDs for custom-design legends: pictograms, special wording, etc. (ask our sales representatives)

Features

- Die-cast aluminum construction
- Modular design for universal mounting
- Trim plate choices: pyramid or round for universal mounting and flat (recessed ceiling)
- Component-free back-box ready to pre-install
- LED strip module can be rotated in the unit for either wall or ceiling mount
- U-shaped clear acrylic panel with laser-etched contour for legend letters
- Long-life LED light source; red LEDs of ALINGAP technology
- Two-wire universal AC input: 120 to 347VAC 50/60Hz
- Sealed, maintenance-free nickel-cadmium battery
- Meets or exceeds CSA 22.2 No.141-10
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the **Emergi-Lite® EX30 Series** of die-cast edge-lit exit signs.

The unit specified for universal mounting shall come standard with a trim plate, trim ring, back box and canopy all made of die-cast aluminum with ______ finish. The trim plate shall have a ______ profile and allow for wall or ceiling mount installation. The trim ring shall allow for recessed installation in walls or ceilings with cavity. The canopy shall allow for wall, end, or ceiling mount. The back box shall be provided with conduit knock-outs at the top, back and end.

The unit specified for recessed ceiling shall come standard with a flat trim plate of die-cast aluminum with _ finish, and a back box of 20-gauge galvanized steel. The back box shall be provided with conduit knock-outs at the top, back and end.

All models shall be provided with a hardware kit including two 27" adjustable bar hangers for back box recessed installation. The unit shall have the trim plate snap and lock in the housing with torsion spring retainers, thereby eliminating any visible screws or hardware. The legend shall be printed on a clear acrylic panel. The panel shall have a U-shape and the legend shall have precision etched 6" high and 3/4" stroke red letters with laser-edged contour and with a white, clear or mirror background. The light source shall be long-life lightemitting diodes (LED) and shall provide even illumination in normal and emergency operation. Red LED technology shall be ALINGAP. The unit shall operate with two-wire universal AC input voltage from 120 to 347VAC and two-wire universal DC input from 6 to 24VDC, each input at less than 1.4W.

The edge-lit sign in a self-powered configuration shall use a sealed nickel-cadmium battery and shall stay illuminated during emergency operation for at least 90 minutes upon AC failure. The self-powered unit with self-test and silent diagnostic functions shall be managed by a micro-controller: it shall execute automatic tests for one minute every 30 days, 30 minutes every 60 days and 90 minutes annually. A diagnostic circuit shall continuously monitor the performance of the battery, charger module and LED lamps. When a fault is detected the pilot light shall change colour from green to red and flash with a specific code. The red light is steady-on in case of battery disconnect; it will flash with one blink for battery failure, two blinks for charger failure and four blinks for LED lamp failure. A label with the diagnostic legend shall be visible next to the pilot light.

The edge-lit sign shall be certified CSA C22.2 No.141 and CSA-C860.

The exit sign shall be Emergi-Lite® model: _____

& PICTOGRAM SIGNS

Features

- Slim-profile extruded aluminum housing
- · Low-profile EZ2 die-cast aluminum canopy
- Universal surface mounting wall, ceiling or end mount
- Click-to-open housing door allows easy access to the panel and electrical wiring
- Extruded acrylic panel with pictogram legend
- Comes with double-face panels for use in single-face and double-face applications
- Long-life white LED light source
- Meets or exceeds CSA.222 No.141-15
- Universal AC input: two-wire 120 to 347VAC; standard DC input: two-wire 6 to 24VDC
- Energy efficient consumes less than 3W in AC or DC-remote mode
- Self-powered models provide minimum two hours of emergency lighting
- Special wording available (CSA C22.2 No. 250.0)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the Emergi-Lite® EAE Series slim-profile pictogram edge-lit sign. The unit shall operate with universal 2-wire AC input voltage of 120 to 347VAC at less than 3W and universal 2-wire DC input voltage from 6 to 24VDC at less than 2.5W. The housing assembly shall be constructed of extruded aluminum with textured finish and colour. The canopy shall be of die-cast aluminum and allow for wall, end, or ceiling mount. The legend shall be printed on a pure-acrylic panel. The panel shall come standard with double-face legend, for single-face and double-face applications. The light source shall be longlife white light-emitting diodes (LED) and shall provide even illumination in normal and emergency operation. The pictogram edge-lit sign in a self-powered configuration shall use a sealed nickel-cadmium battery of 2.4V nominal voltage and shall stay illuminated during emergency operation for at least two hours upon AC failure.

The pictogram edge-lit sign shall be listed CSA 22.2 No. 141-15.

The equipment shall be Emergi-Lite® model: ____

ED Series

Die-cast pictogram sign

Features

- Slim contoured body design
- Single & double face models supplied with two pictogram films, universal face models supplied with three pictogram films for directional selection
- Durable powder-coated die-cast construction in a variety of finishes
- · Slim-line die-cast canopy for ceiling and end mounting
- Universal mounting, wall, end, or ceiling
- Dual voltage input: 120/277VAC 60Hz or 120/347VAC 60Hz
- Low power consumption: less than 3.5W
- Maintenance-free, long life sealed nickel-cadmium battery delivers minimum 120 minutes of back-up lighting
- Optional vandal-proof shield and tamper-proof screws
- Special wording available (CSA C22.2 No. 250.0)
- Meets or exceeds CSA 22.2 No. 141-15
- Warranty details at: www.emergi-lite.ca

Typical specifications

Stylish and built of die-cast aluminum, the new **Emergi-Lite® ED Series** offers superior workmanship, versatile mounting capabilities and economical, long-lasting LED performance. Supply and install the **ED Series** pictogram sign. The faceplate(s) and the back plate shall snap together and be made of die-cast aluminum. No screws are necessary to hold the faceplate(s) or the back plate to the housing. The light source shall be light emitting diodes (LED). The LED strip shall provide illumination in normal and emergency operation and shall be mounted inside the pictogram sign on a plastic frame/reflector.

The equipment in a self-powered configuration shall use a sealed nickel-cadmium battery of 2.4V nominal voltage. The equipment shall recharge the battery in 24 hours and stay illuminated at least for a minimum 120 minutes upon AC failure. The equipment shall operate with a dual-voltage input of 120/277VAC 60Hz or 120/347VAC 60Hz with less than 3.5W of consumption.

When specified, the self-powered model equipped with advanced diagnostic shall self-test by simulating a power failure for one minute every 30 days, 30 minutes every 6 months and 120 minutes annually. A diagnostic circuit shall continuously monitor the performance of the battery, charger module and LED strip. Upon failure detection the system shall display the error on the AC pilot lamp, which will change color and will flash with a specific code.

The pictogram sign shall be CSA 22.2 No.141-15 certified.

The pictogram sign shall be Emergi-Lite® model: _____

EA Series

Extruded aluminum pictogram sign

Features

- Durable extruded, one-piece aluminum housing and faceplates
- White LED light source
- Supplied standard with two pictogram films per face, for direction selection
- Meets or exceeds CSA 22.2 No.141-10 standard for pictogram signs
- Universal AC input: two-wire 120 to 347VAC; standard DC input: two-wire 6 to 24VDC
- Energy efficient consumes less than 2.5W in AC or DC-remote mode
- Self-powered model gives standard two hours of back-up lighting
- · Universal mounting end, wall or ceiling
- Easy access to wiring entry for all mounting options
- Comes standard with the **Emergi-Lite®** EZ2 canopy for quick and easy installation
- Special wording available (CSA C22.2 No. 250.0)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the Emergi-Lite® EA Series pictogram signs. The equipment shall operate with universal 2-wire AC input voltage of 120 to 347VAC at less than 2.5W and universal 2-wire DC input voltage from 6 to 24VDC at less than 1.5W for single and double face signs. The equipment shall be suitable for wall, end, or ceiling mount. The housing shall be constructed of rugged extruded aluminum and have a maximum depth of 2-1/2". The faceplate(s) shall be constructed of extruded aluminum and shall incorporate a protective clear polycarbonate panel. Each faceplate shall come standard with two legend films for pictogram and direction selection. The light source shall be white light-emitting diodes (LED) and shall provide even illumination in normal and emergency operation. The pictogram sign in a self-powered configuration shall use a sealed nickel-cadmium battery of 2.4V nominal voltage and shall stay illuminated during emergency operation for at least two hours upon AC failure. The pictogram sign shall meet CSA 22.2 No.141-10.

LPEX50 Series

Extruded aluminum exit sign

Features

- Durable, extruded, one-piece aluminum housing
- Long-life, energy-efficient **ALINGAP** technology red LED light source completely enclosed in acrylic module
- Single illumination module lights both single and double face exit signs
- Highly energy efficient consumes less than 2.5W in AC or DC mode
- Normal AC and emergency DC operation 120/277/347V AC input; 6 to 24V DC input
- Comes with the Emergi-Lite[®] EZ2 canopy for quick and easy installation
- Also available with power pack; see LPEX50-P catalogue sheet
- CSA certified, meets or exceeds CSA 22.2 No. 141-15
 requirements
- Warranty details at: www.emergi-lite.ca/

Typical specifications

Supply and install the **Emergi-Lite®** LPEX50 Series LED exit signs. The equipment shall operate with universal AC input voltage of 120VAC, 277VAC or 347VAC at less than 1.5W and universal two-wire DC input voltage from 6VDC to 24VDC at less than 1.5W for single or double face signs.

The housing shall be constructed of rugged extruded aluminum and have a maximum depth of 2-1/2". The faceplate(s) shall be constructed of extruded aluminum and come standard with knockout chevrons.

The light source shall be light emitting diodes (LED). The LED lamps shall provide illumination in normal and emergency operation and shall be mounted inside the exit housing, not on the face. The red LED technology shall be **ALINGAP**. An LED-sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4" stroke letters with even illumination. The exit sign in a self-powered configuration shall stay illuminated during emergency operation for at least 90 minutes upon AC failure.

The exit sign shall be CSA-C860 approved and meets CSA 22.2 No.141-15.

The equipment shall be Emergi-Lite® model: _____

EXIT & PICTOGRAM SIGNS

EAC Series

Extruded aluminum combination unit

Features

- Solid extruded aluminum construction, painted factory white
- Universal mounting: end, wall or ceiling
- Meets or exceeds CSA 22.2 No.141-10 standard for unit equipment and pictogram safety signs
- · Legend illuminated by long-life white LED's
- Comes standard with two pictogram films per face, for direction selection
- 5W LED emergency lights provide 70' of egress illumination on a 6-foot wide path
- Sealed, maintenance-free lead-calcium battery
- Remote load capacity: 70' up to 350' of egress illumination when using LED remote heads
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the Emergi-Lite® EAC Series combination emergency light battery unit and the pictogram sign. The unit shall be suitable for universal mounting: wall, end, or ceiling. The unit shall include a power pack made of steel and a legend housing including a one-piece extruded aluminum frame. The legend housing shall have a maximum depth of 2-1/2". The faceplate(s) shall be of extruded aluminum and shall incorporate a protective clear polycarbonate panel. Each faceplate shall come standard with two legend films for pictogram and direction selection. The light source shall be white light-emitting diodes (LED) and shall provide even illumination in normal and emergency operation. The power pack shall be complete unit equipment with battery charger and rechargeable battery. The battery shall be maintenancefree, sealed Lead-Calcium. In case of AC power failure the equipment shall provide minimum 30 minutes of emergency lighting. The rated DC power available for emergency lights shall be 27W or up to 80W, as specified. The emergency heads shall require no tools to adjust and aim. The heads shall be made of durable thermoplastic construction as otherwise specified.

Units with "auto-diagnostic option" shall include a microcontroller circuit to monitor all the critical functions of the equipment and execute periodical tests of one minute every 30 days, 10 minutes every 6 months and 30 minutes every 12 months. In case of equipment malfunction, an LED-based diagnostic display shall generate a service alarm and indicate the cause of failure: battery, charger circuit, emergency lamps or pictogram sign lamps.

The equipment shall meet or exceed the requirements of CSA 22.2 No.141-10 standard.

The equipment shall be Emergi-Lite® model: _____

LPEX50-P Series

Extruded aluminum combination unit - 6/12V

Features

Exit Sign

- Extruded aluminum faceplate
- Universal, field-selectable chevrons (knockout)
- ALINGAP LED technology

Power Pack

- Completely self-contained unit with rechargeable sealed lead battery
- Lamp heads require no tools to adjust or aim
- Meets or exceeds CSA 22.2 No. 141 requirements
- Warranty details at: www.emergi-lite.ca/

Typical specifications

Supply and install the Emergi-Lite® LPEX50-P LED exit sign and power pack combination series. The exit housing shall be constructed of rugged extruded aluminum. The faceplate shall be constructed of extruded aluminum. The exit sign shall have a maximum depth of 2-1/2". The faceplate(s) shall come standard with knockout chevrons. The light source shall be light emitting diodes (LED). The LED lamps shall provide illumination in normal and emergency operation and shall be mounted inside the exit housing, not on the face. An LED-sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4" stroke letters with even illumination. The power pack shall be a completely self-contained emergency unit with its own charger and rechargeable battery. The housing shall be made of steel, painted factory white. The unit shall be designed to furnish exit illumination from the normal AC source. When a power failure occurs the mounted heads along with the exit sign are illuminated in emergency mode for a minimum of 30 minutes. The power pack is furnished with a test switch and high charge pilot light and is available as either 18, 36 or 72W. The heads shall require no tools to adjust and aim. The heads will be constructed of a durable thermoplastic construction and use 6V, 4W LED lamps or as otherwise specified.

The exit sign shall be CSA-C860 approved and meets CSA 22.2 No. 141.

The equipment shall be Emergi-Lite® model: ___

ES Series

All metal pictogram sign

Features

- Metal construction using Canadian cold-rolled steel
- Based on a modular design, this product comes pre-assembled for quick, easy installation
- Long-life white LED light source warrantied for 10 years
- Two-wire universal AC input: 120 to 347VAC; two-wire standard DC input: 6 to 24VDC
- Energy efficient consumes less than 2.5W in AC mode and only 1W in DC-remote
- Self-powered model delivers standard two hours of back-up lighting
- · Universal mounting end, wall or ceiling
- Easy access to wiring entry for all mounting options
- Canopy mounting system designed specifically for ease of installation
- Meets or exceeds CSA 22.2 No.141-15
- Special wording available (CSA C22.2 No. 250.0)
- Warranty details at: www.emergi-lite.ca

Nexus®Pro 🚯 🚯

Typical specifications

Supply and install the **Emergi-Lite® ES Series** pictogram signs. The equipment shall operate with universal 2-wire AC input voltage of 120 to 347VAC at less than 2.5W and universal 2-wire DC input voltage from 6 to 24VDC at 1W consumption for single and double face signs.

The sign shall be suitable for wall, end, or ceiling mount. The frame and back plate shall each be of one-piece steel construction. The faceplate(s) shall be constructed of robust clear polycarbonate panels with an opaque border coloured factory-white. The light source shall be white light-emitting diodes (LED) and shall provide even illumination in normal and emergency operation. The pictogram sign in a self-powered configuration shall use a sealed nickel-cadmium battery of 2.4V nominal voltage and shall stay illuminated during emergency operation for at least two hours upon AC failure.

The exit sign shall be listed CSA 22.2 No.141-15.

The equipment shall be Emergi-Lite® model: ____

- Single illumination module lights both single and double face exit signs
- Highly energy efficient, consumes a maximum of 5.5W in AC or DC mode (standard model)
- Normal AC and emergency DC operation 120V to 347VAC and 6V to 24VDC input
- CSA certified, meets or exceeds CSA 22.2 No. 141
 requirements
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the **Emergi-Lite® bilingual C8ES70 or C8SE70 Series** LED exit sign. The equipment shall operate with universal AC input voltage of 120 to 347VAC at less than 2W and universal two-wire DC input voltage from 6VDC to 24VDC at less than 3.5W for single and double face signs. The housing shall be constructed of rugged extruded aluminum and have a maximum depth of 2-1/2". The faceplate(s) shall be constructed of extruded aluminum and come standard with knockout chevrons. The equipment shall have three (3) canopies that shall fasten for installation in either ceiling- or wall-mount applications. The light source shall be light emitting diodes (LED).

The LED lamps shall provide illumination in normal and emergency operation and shall be mounted inside the exit housing, not on the face. Red LED technology shall be **ALINGAP** An LED-sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4" stroke letters with even illumination.

The exit sign in a self-powered configuration shall be equipped with a nickel-cadmium battery and shall stay illuminated during emergency operation for at least 60 minutes upon AC failure.

The exit sign shall be CSA-C860 approved and meets CSA 22.2 No. 141.

The equipment shall be **Emergi-Lite**[®] model: ______.

ESC Series

Steel pictogram combination unit

Features

- Universal mounting: end, wall or ceiling
- Long-life white LED light sources is warrantied for 10 years
- Sealed, maintenance-free, 6V or 12V lead-calcium battery
- Remote load capacity: 80W up to 560' of egress illumination when using LED remote heads
- Meets or exceeds CSA 22.2 No.141-15
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

nexus[®] Nexus[®]Pro 🚯 🚯

Typical specifications

Supply and install **Emergi-Lite® ESC Series** combination emergency light battery unit and pictogram sign. The unit shall be made of solid steel sheet metal and be suitable for universal mounting: wall, end, or ceiling. The legend housing shall have a maximum depth of 2-1/8". The legend face plate(s) shall be constructed of robust clear polycarbonate panel(s) with an opaque border coloured factorywhite.

The light source shall be white light-emitting diodes (LED) and shall provide even illumination in normal and emergency operation. The power pack shall include one circuit board with test switch and pilot light for battery charger and legend LED driver. The unit shall include one 6V, maintenance-free, sealed lead-calcium battery and shall provide minimum 30 minutes of emergency lighting upon AC power failure. The electrical power available for emergency lights shall be 28W or up to 72W, for 6V and 50W or up to 80W for 12V, as specified. The emergency heads shall require no tools to adjust and aim. The equipment shall meet or exceed the requirements of CSA 22.2 No.141-15 standard.

The equipment shall be Emergi-Lite® model: _

EX10-P & LPEX10-P Series

Metal combination unit

Features

- Dual input voltages 120/347VAC
- · Comes pre-assembled for quick, easy installation
- · Universal mounting end, wall or ceiling
- Easy access to wiring entry for all mounting options
- Canopy mounting system designed specifically for ease of installation
- Universal fields-selectable chevrons (knock out)
- Energy efficient complete unit consumes less than 5W
- CSA certified, meets or exceeds CSA 22.2 No. 141 requirements
- · Long life, energy-efficient LED light source, mounted inside the exit housing, not on the faceplate
- Warranty details at: www.emergi-lite.ca

Supply and install the Emergi-Lite® EX10-P & LPEX10-P Series LED exit sign and power pack combination series. The exit housing and faceplates shall be constructed of steel. The exit sign shall have a maximum depth of 2-1/2". The faceplate(s) shall come standard with knockout chevrons. The light source for the exit sign shall be light- emitting diodes (LED). The LED lamps shall provide illumination in normal and emergency operation and shall be mounted inside the exit housing, not on the face. Red LEDs shall be of ALINGAP technology. An LED sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4" stroke letters with even illumination. The power pack shall be a completely selfcontained emergency unit with its own charger and rechargeable battery. The housing shall be made of steel. The power pack shall include a test switch and high charge pilot light. The equipment shall be designed to furnish exit illumination from the normal AC source. When a power failure occurs the exit sign along with the emergency heads shall illuminate for a minimum of 30 minutes. The power available for emergency lights shall be 28W or as otherwise specified. The heads shall require no tools to adjust and aim. The heads will be of a durable thermoplastic construction and use 6V, 9W and 12V, 9W lamps or as otherwise specified.

The exit sign shall be CSA-C860 approved and meets CSA 22.2 No. 141.

EP Series

All-plastic commercial-grade pictogram sign, universal-mount and snap-fit

Features

The **Emergi-Lite® EP Series** is a compact pictogram sign with an all-in-one, snap-fit design. Easy to install and affordable, the **EP Series** pictogram sign is ideally suited for commercial applications, especially those in which large numbers of pictogram signs are required.

- Durable, factory white, thermoplastic housing
- · Universal mounting: wall-, end-, or ceiling-mount
- Long-life white LED light source
- Certified CSA 22.2 No.141-10 for pictogram safety signs
- Two-wire universal AC input: 120 to 347VAC; two-wire standard DC input: 6 to 24VDC
- Energy efficient consumes less than 2.5W in AC mode and only 1W in DC-remote
- Self-powered model delivers standard two hours of back-up lighting
- · Optional vandal-proof shield and tamper-proof screws
- Special wording available (CSA C22.2 No. 250.0)
- Warranty details at: www.emergi-lite.ca

Dimensions

Dimensions are approximate and subject to change.

Typical specifications

Supply and install the **Emergi-Lite® EP** pictogram sign. The equipment shall operate with universal 2-wire AC input voltage of 120 to 347VAC at less than 2.5W and universal 2-wire DC input voltage from 6 to 24VDC at 1W consumption for single and double face signs. The sign shall come standard with a canopy and shall be suitable for wall, end, or ceiling mounting. The frame, faceplates, back plate and canopy shall each be constructed of a one-piece UV-stabilized thermoplastic material colored factory white. The light source shall be white light-emitting diodes (LED) and shall provide even illumination in normal and emergency operation. The equipment in a self-powered configuration shall use a sealed nickel-cadmium battery of 2.4V nominal voltage. The equipment shall recharge the battery in 24 hours and stay illuminated at least two hours upon AC failure.

The pictogram sign shall be listed to the CSA 22.2 No.141-10 standard.

The equipment shall be Emergi-Lite® model: _

Premier™ family

Premier™ Combo Series

Typical specifications

Supply and install the **Emergi-Lite® Premier™ Series** exit sign. The standard equipment shall operate with a dual-voltage input of 120/347VAC with less than 2W of consumption and a universal two-wire DC input voltage from 6VDC to 48VDC at less than 2.5W for single and double face signs. The exit shall be suitable for wall, end, or ceiling mount. The faceplate shall be constructed of durable high impact thermoplastic. No screws are necessary to hold the faceplate or the back plate to the housing. The faceplates shall come standard with snap in/out chevrons. The frame shall consist of one-piece factory white thermoplastic. The light source shall be light emitting diodes (LEDs). The LEDs shall provide illumination in normal and emergency operation and shall be mounted inside the exit housing. Red LED technology shall be ALINGAP. An LED-sensitive diffuser shall be mounted in front of the LEDs to provide the 6" high by 3/4" stroke letters with even illumination. The exit sign shall be C860 approved. The exit sign in a self-powered configuration shall be equipped with a sealed, maintenance-free nickel-cadmium battery. The equipment shall recharge the battery in 24 hours and stay illuminated at least 90 minutes upon AC failure. The selfpowered model equipped with advanced diagnostic shall self-test by simulating a power failure for one minute every 30 days, 30 minutes every 60 days and 90 minutes every 360 days. A diagnostic circuit shall continuously monitor the performance of the battery, charger module and LED lamps. Upon failure detection the system shall display the error on the AC pilot lamp, which will change color from green to red and will flash with a specific code. The red light shall be steady-on in case of "Battery Disconnect"; it shall flash with one blink for "Battery failure", two blinks for "Charger failure" and four blinks for "LED lamp failure. A label with the diagnostic legend shall be visible next to the pilot light.

The equipment shall be Emergi-Lite® model:

Thermoplastic pictogram combination unit

Features

The **Premier™ Series** of combination units (unit equipment and pictogram sign) are designed to complement designer's look and ease of installation with performance and cost-competitiveness.

- One-pack combination of battery unit and pictogram sign, a compact and contemporary design
- Durable injection-molded thermoplastic housing with push-to-snap design
- Available in single or double face configurations both with means for ceiling mounting
- Supplied standard with two (single face) or three pictogram films (universal face) for direction selection
- Two LED lamps, shielded by a clear polycarbonate cover
- Twin LED lights provide up to 89 feet of egress illumination on a 6-foot wide path
- Sealed, maintenance-free, Lead-Calcium or Nickel-Metal-Hydride batteries
- Remote load capacity: one unit equipment with LED remote lights covers up to 712 feet (217m) of egress illumination
- Dual voltage input: 120/347VAC or 120/277VAC
- · Comes standard with non-audible auto-diagnostics
- Optional vandal-resistant shield with tamper-proof screws
- Certified CSA C22.2 No.141
- Optional: Nexus® Compatible
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

EMERGI-LITE

Typical specifications

Supply and install the **Emergi-Lite® Premier™ Series** combination of unit equipment and pictogram sign. The unit frame and faceplates shall be made of injection-molded thermoplastic.The faceplates shall feature a uniformly illuminated legend. The light source shall be long-life white light-emitting diodes (LED). The unit shall be equipped with two emergency heads with tool-less adjustable swivels and long-life LED lamps of ______ V and ______ W. Each lamp shall be protected by a snap-on, shock-absorbent, transparent polycarbonate cover.

The AC input voltage shall be standard 120/347VAC 60Hz. The unit shall be equipped with a test switch and a green pilot light, located on the faceplate above the pictogram legend. The battery charger shall be driven by a micro-controller. All electronic circuitry (charger, LED driver, signage LED's) shall be installed on a single printed circuit board PCB. The unit equipped with self-testing/self-diagnostic features shall automatically self test for one minute every 30 days, 10 minutes in the 6th month and 30 minutes annually. When a fault is detected, the bi-color pilot-light shall turn from green to red and shall flash following a particular code. The code description shall be displayed on a label next to the pilot light to identify the failure type: battery, charger circuitry, LED lamps for signage, or emergency lights.

The combination unit shall meet or exceed the standard CSA C22.2 No.141-10.

Thermoplastic combination unit

Features

The **Premier™ Series** of combination units (emergency light battery unit with an exit sign) are designed with aesthetics, ease of installation and performance in mind.

- One-pack combination of battery unit and exit sign, a compact and contemporary design
- Durable injection-molded thermoplastic housing with push-to-snap design
- Available in single or double face configurations both with means for ceiling mounting
- Comes with the **Emergi-Lite® Premier™** EZ2 canopy and field-selectable snap chevrons for quick and easy installation
- Exit sign module illuminated by long-life ALINGAP red LEDs
- Two LED lamps, shielded by a clear polycarbonate cover
- LED lamps with life expectancy 50,000+ hours
- Sealed, maintenance-free, lead-calcium or nickel-metal-hydride batteries
- Dual voltage input: 120/347VAC or 120/277VAC.
- Optional vandal-resistant shield with tamper-proof screws
- Certified CSA C22.2 No.141
- Optional advance diagnostics circuitry available
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the Emergi-Lite® Premier™ Series combination emergency light battery unit and exit sign. The standard equipment shall operate with a dual voltage input of 120/347VAC. The unit shall be suitable for wall or ceiling mount. The unit frame and faceplates shall be made of injectionmolded durable high-impact thermoplastic and come standard with snap in/out chevrons. No screws are necessary to hold the faceplate or backplate to the housing. The onepiece thermoplastic frame is molded in white (optional black). The faceplates shall feature a uniformly illuminated legend. The light source shall be light emitting diodes (LED) and shall provide illumination in normal and emergency operation and shall be mounted inside the combination housing. Red LED technology shall be ALINGAP. An LED-sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4"stroke letters with even illumination.

The unit shall be equipped with two emergency heads with tool-less adjustable swivels (lamps of 12W or less) and longlife LED type lamp ______ V and _____ W. Each lamp shall be protected by a snap-on, shock- absorbent, transparent polycarbonate cover.

The unit shall be equipped with a test switch and a green pilot light, located on the faceplate above the EXIT legend. The battery charger shall be driven by a micro-controller. All electronic circuitry (charger, LED driver, LED's) shall be installed on a single printed circuit board PCB.

The unit equipped with self-testing / self-diagnostic features shall automatically self test for one minute every 30 days, 10 minutes in the 6th month and 30 minutes annually. When a fault is detected, the bi-color pilot light shall turn from green to red and shall flash, identifying the source of the failure: battery, charger circuitry, lamp load, LED strip. The exit sign module shall be CSA-C860 approved.

The combo unit shall be **Emergi-Lite**® model: _____

CMPS-E Series

Thermoplastic pictogram sign

Features

- Energy efficient, long-life white LEDs consuming 1.5W at normal operation
- 120/277/347VAC Input
- Universal single and double face
- Automatic, temperature compensated, pulse type charger
- Low voltage disconnect prevents over discharge of battery
- Automatic brownout protection
- Battery lock-out prevents discharge during installation
- Comes standard with three pictogram legends for direction selection
- Red LED charger monitor
- Injection-molded off-white thermoplastic ABS housing
- Fast and easy installation with snap-together design
- · Ceiling, wall or end mount installation
- CSA C22.2 no.141-10 listed
- Selection of self-powered using a 3.6V Ni-Cd battery and AC model

EN10 Series

NEMA-3R rated pictogram sign – 10" legend

Features

- NEMA-3R rated
- Gasketed fiberglass housing designed specifically for industrial applications
- Sealed, vandal-resistant polycarbonate faceplate
- Suitable for cold-weather: -20°C (-4°F) for AC/DC
- Wall or ceiling mounting; wall or ceiling brackets available for easy installation
- Normal AC and emergency DC operation120 to 347VAC input; 6 to 24 DC input
- Certified for 160' viewing distance. Ideal for large facilities with high ceilings
- Supplied standard with two pictogram films for direction selection
- Meets or exceeds CSA C22.2 No.141-15
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install **Emergi-Lite® EN10 Series** LED pictogram sign. The equipment shall be NEMA-3R rated and operate with universal two-wire AC input voltage from 120VAC to 347VAC at less than 3W per face and universal two-wire DC input voltage from 6VDC to 24VDC at less than 3W per face. The housing shall be of grey fiberglass, gasketed, specially designed for industrial environment. The sealed front cover shall be constructed of heavy duty vandal-resistant transparent polycarbonate of 4mm thickness and shall be bent around the back box for increased rigidity. The front cover will feature an illuminated legend with a running man pictogram.

The equipment shall be suitable for wall or ceiling mount and be designed specificallyfor high abuse areas, wetlocations, dustand oil-tight applications.

The equipment shall be NEMA-3R and CSA 22.2 No.1 41-15 standard.

The equipment shall be **Emergi-Lite®** model:

Survive-All[™] EN Series

NEMA-4X & NSF certified pictogram sign

Features

- NEMA-4X certified
- NSF compliant for food processing
- Polymeric enclosure is fully gasketed around lens and canopy to secure against water leaks
- Sealed, heavy-duty, vandal-resistant polycarbonate faceplate
- Universal mounting: wall-, end-, or ceiling-mount
- Suitable for cold weather: -40°C for AC/DC and -20°C for self-powered models (option: -CW)
- Tamper-resistant, concealed test switch with magnetic action
- Long-life white LED light source is warrantied for 10 years
- Supplied standard with two pictogram films per face, for direction selection
- Universal AC input: two-wire 120 to 347VAC; standard DC input: two-wire 6 to 24VDC
- Energy efficient consumes less than 2.5W in AC or DC-remote mode
- Self-powered models deliver two hours of back-up lighting
- Meets or exceeds CSA 22.2 No.141-15
- Special wording available (CSA C22.2 No. 250.0)

Black

Factory white

Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the **Emergi-Lite® Survive-All™ EN Series** pictogram signs. The equipment shall be certified for NEMA- 4X and designed specifically for high abuse areas, wet locations, and cold weather applications. The equipment frame shall be of industrial grade polyvinyl chloride with a gasket around lenses and canopy.

The faceplate(s) shall be constructed of heavy-duty vandal-resistant polycarbonate and feature an even illuminated legend. Each faceplate shall come standard with two legend films for pictogram and direction selection. The light source shall be white light-emitting diodes (LED). The pictogram sign shall operate with universal 2-wire AC input voltage of 120 to 347VAC at less than 2.5W and universal 2-wire DC input voltage from 6 to 24VDC at less than 1W for single and double face signs.

The self-powered model shall include a concealed green pilot light and magnet-sensitive test switch, shall use a sealed nickel-cadmium battery of 2.4V nominal voltage and shall stay illuminated during emergency operation for at least two hours upon AC failure. When specified, the self-powered model shall include auto-test functions: it shall execute automatic tests for 5 minutes every 30 days, 30 minutes every 60 days and two hours annually. When a fault is detected, the bi-colour pilot light shall turn from green to red and flash following a particular code.

The code description shall be visible on a label next to the pilot light to identify the failure type: battery, charger circuitry, or LED lamps.

The pictogram sign shall be listed CSA 22.2 No.141-15 standard. The equipment shall be **Emergi-Lite**[®] model: _____

Polyvinyl chloride exit sign

Features

- NEMA-4X certified
- NSF certified for food processing
- Polyvinyl chloride enclosure is fully gasketed around lens and canopy to prevent water infiltration
- Sealed faceplate of heavy-duty, vandal-resistant polycarbonate with evenly illuminated legend
- Universal mounting: wall-, end-, or ceiling-mount
- Suitable for cold weather: -40°C on non self-powered sign and -20°C on self-powered ("CW" option)
- Tamper-resistant magnetic test switch
- Self-diagnostic circuitry standard on all self-powered models
- Energy efficient consumes less than 3W in AC or DC mode
- Normal AC and emergency DC operation 120 to 347V universal AC dual tap; 6 to 48V universal DC
- NEXUS[®] compatible
- Meets or exceeds CSA 22.2 No. 141.
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install Emergi-Lite® Survive-All™ LPEX600 Series LED exit signs. The equipment shall operate with universal two-wire AC input voltage from 120VAC to 347VAC at less than 3W and universal two-wire DC input voltage from 6VDC to 48VDC at less than 2W for single and double face signs. The equipment frame shall be of industrial grade polyvinyl chloride with a gasket around lenses and canopy designed specifically for hostile environments. The faceplate(s) shall be constructed of heavy-duty vandal-resistant polycarbonate and feature an even illuminated legend. The light source shall be light emitting diodes (LED). Red LED technology shall be ALINGAP. An LED-sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4" stroke letters with even illumination. The exit shall be certified for NEMA-4X and designed specifically for high abuse areas, wet locations, and cold weather -20°C (-4°F) applications.

The self-powered model shall stay illuminated during emergency operation for at least 90 minutes upon AC failure and shall include a magnetic test switch and self-testing and self-diagnostic functions. The equipment shall automatically self test for 5 minutes every 30 days, 30 minutes every 60 days and 90 minutes annually. A "Service Required" lamp shall be located near the test switch and flash when a fault is detected. A two-LED diagnostic display shall be located inside the equipment and shall identify the eventual source of failure (battery, charger circuitry, or LED lamps).

The exit sign shall be CSA-C860 approved and meets CSA 22.2 No. 141.

The equipment shall be Emergi-Lite® model:

Survive-All[™] ENC Series

NEMA-4X & NSF certified pictogram combination unit

Features

- Certified NEMA-4X for wall or ceiling mount
- NSF certified certified for use in food processing areas
- Polyvinyl chloride frame, with built-in gasket to prevent water infiltration
- Sealed, vandal-resistant faceplate of polycarbonate
- Long-life white LED light sources is warrantied for 10 years
- Comes standard with two pictogram films per face, for direction selection
- Two high-performance LED lamps shielded by a clear polycarbonate cover
- Sealed, maintenance-free lead-calcium or nickel-cadmium batteries
- Remote load capacity: covers with 4W LED lights 100' up to 230' of egress illumination
- Comes standard with auto-diagnostic
- Cold-weather option: -40°C (-40°F) with only 14W extra power consumption
- Meets or exceeds CSA 22.2 No.141-15
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Black

Typical specifications

Supply and install **Emergi-Lite® Survive-All™ ENC Series** combination emergency light battery unit and pictogram sign. Designed specifically for industrial environments, the equipment frame shall be of industrial grade polyvinyl chloride with gaskets around both sides of frame contour.

The back plate shall be made of 1/8" thick aluminum sheet and shall include knock-outs for installation on an electrical box. The faceplate(s) shall be constructed of heavy-duty vandal-resistant clear polycarbonate and feature a uniformly illuminated pictogram legend. Each face plate shall come standard with two legend films for pictogram and direction selection.

The light source shall be long-life white light-emitting diodes (LED). The unit shall have attached a lower compartment containing two emergency heads with adjustable swivels and long-life LED lamps of ______ V and _____ W. The heads shall be installed on a shield housing made of rigid thermoplastic and shall be protected by a shock-absorbent, clear polycarbonate cover. The standard AC input voltage shall be 120/347VAC.

The unit shall be equipped with a magnetic test switch and an LED pilot light protected by the clear face plate. The unit shall perform auto-test functions managed by a microcontroller and shall automatically self-test for one minute every 30 days, 10 minutes in the 6th month and 30 minutes annually. When a fault is detected, the bi-colour pilot light shall turn from green to red and flash following a particular code. The code description shall be displayed on a label next to the pilot light to identify the failure type: battery, charger circuitry, LED lights for the signage, or emergency lights.

The combination unit shall meet or exceed the standard CSA C22.2 No.141-15.

The equipment shall be Emergi-Lite® model: _____

Survive-All[™] LPEX600-N Series

NEMA-4X & NSF certified combination unit

Features

- NEMA-4X certified for wall or ceiling mount
- NSF certified for food processing
- High efficiency LED lamps up to 12V, 12W or white LED emergency lights
- Continuous self-diagnostic monitoring and monthly self-testing
- Fully automatic charger is solid state
- Non-intrusive magnetic test switch
- Cold weather (-40°C) option
- Comes standard with tamper-proof screws
- NEXUS[®] compatible
- · Sealed maintenance-free nickel cadmium battery
- Meets or exceeds CSA 22.2 No. 141
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Survive-All™ NEMA 4X & NSF certified family					
		EXIT		9	
ENC Series	EN Series	LPEX600 Series	NXM Series	EF39 & EF39P Series	

Typical specifications

Supply and install Emergi-Lite[®] Survive-All[™] LPEX600-N combination of unit equipment and exit sign series. The equipment shall operate under two input voltage, 120VAC or 347VAC. The equipment frame shall be of industrial grade polyvinyl chloride with a gasket around lenses and canopy designed specifically for hostile environments. The unit shall be certified for NEMA-4X for wall and ceiling mount designed specially for high abuse areas, wet locations, and cold weather (CW option). The faceplate(s) shall be constructed of heavy-duty vandal-resistant polycarbonate and feature an even illuminated legend. The legend light source shall be light emitting diodes (LED). Red LED technology shall be ALINGAP. Emergency lights shall be fully adjustable and high efficiency LED lamps. The Emergi-Lite® Advanced Diagnostic Microcontroller board shall supply the rated load for minimum of 1/2 hour to 87.5% of the rated battery voltage. The unit shall be rated 120/347 V, 60 Hz and be CSA listed. The unit shall have an output of _____ V and _____ W. The battery charger shall be driven by a micro-controller and shall include functions of Lockout, Brownout Circuits, and Low Voltage Disconnection. It protects the unit from over-current, short-circuit, and reverse polarity. The unit shall self-test for 1 minute every 30 days, 10 minutes on the 6th month and 30 minutes every 12 months. The unit shall be capable of full recharge in compliance with CSA specifications. The unit shall be furnished with a magnetic test switch. A "Service Required" lamp shall be located near the test switch and flash when a fault is detected. A four-LED diagnostic display shall be located inside the equipment and shall identify the source of failure: battery, charger circuitry, LED lamps or emergency lights. The exit sign shall be listed CSA-C22.2 No. 141 and CSA-C860 approved.

The equipment shall be Emergi-Lite® model:

EH Series

Pictogram sign–hazardous locations Class I Division 2- compliant

Features

- Compliant Class I Division 2, Groups A, B, C and D as per CSA C22.2 No.137-M1981
- Includes the addition of Class II Div. 1&2 Groups E, F and G as well as Class III ratings
- Temperature code T6 (maximum + 85°C (185°F)) as per Canadian Electrical Code, Part I and CSA C22.2 No.137-M1981
- High-impact thermoplastic frame with built-in gasket to secure against liquid leaks
- Sealed, heavy-duty, vandal-resistant polycarbonate faceplate(s)
- Concealed pilot light and test switch with magnetic action
- Long-life white LED light source
- Supplied standard with two pictogram films per face, for direction selection
- Meets or exceeds CSA 22.2 No.141-10 standard for pictogram signs
- Universal AC input: two-wire 120 to 347VAC; standard DC input: two-wire 6 to 24VDC
- Energy efficient consumes less than 2.5W in AC or DCremote mode
- Self-powered models come standard with auto-diagnostic functions and deliver two hours of back-up legend illumination
- Suitable for cold-weather: -40°C (-40°F) for AC/DC and -20°C (-4°F) for self-powered models (option: -CW)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the Emergi-Lite® EH Series of pictogram signs. The equipment shall be certified for Hazardous Locations: Class I Division 2 Groups A, B, C and D with a temperature code T6 (maximum 85°C (185°F)). The equipment frame shall be of industrial grade polyvinyl chloride with a gasket around lenses and canopy. The faceplate(s) shall be constructed of heavy-duty vandal-resistant polycarbonate and feature an even illuminated pictogram legend. Each faceplate shall come standard with two legend films for pictogram and direction selection. The light source shall be long-life white light- emitting diodes (LED). The pictogram sign shall operate with universal 2-wire AC input voltage of 120 to 347VAC at less than 2.5W and universal 2-wire DC input voltage from 6 to 24VDC at less than 1W for single and double face signs. The self-powered model shall include a concealed pilot light and magnet-sensitive test switch, shall use a sealed nickel-cadmium battery of 2.4V nominal voltage and shall stay illuminated during emergency operation for at least two hours upon AC failure. The self-powered model shall include auto-test functions: it shall execute automatic tests for 5 minutes every 30 days, 30 minutes every 60 days and two hours annually. When a fault is detected, the bi-colour pilot light shall turn from green to red and flash following a particular code. The code description shall be visible on a label next to the pilot light to identify the failure type: battery, charger circuitry, or LED lamps.

The pictogram sign shall meet or exceed the CSA 22.2 No. 141-10 standard.

The equipment shall be Emergi-Lite® model: _

LPEXHZ Series

Hazardous location LED exit sign Class I Division 2- compliant

EXIT

Features

- Certified Class I Zone 2, Groups IIA, IIB and IIC
- Certified Class I Division 2, Groups A, B, C and D as per CSA C22.2 No.137-M1981
- Temperature code: T6 (maximum 85°C as per Canadian Electrical Code, Part I and CSA C22.2 No.137-M1981)
- CSA certified, meets or exceeds CSA 22.2 No. 141 requirements
- Input voltages: 120 to 347VAC universal AC input; 6 to 48VDC universal DC input
- High impact thermoplastic frame, with built-in gasket to prevent water infiltration
- Suited for areas with the risk of presence of flammable gases, vapors or liquids able to create an explosive atmosphere
- Sealed faceplate of heavy-duty, vandal-resistant polycarbonate
- Tamper-resistant, hermetically sealed magnetic test switch
- Auto-diagnostic circuitry is standard on self-powered models
- Sealed, maintenance-free, nickel-cadmium batteries
- Batteries recharge as per CSA requirements and provide 90 minutes of emergency operation
- Long-life, energy-efficient ALINGAP red LED light source
- Energy efficient consumes less than 3W in AC or DC mode
 Comes standard with industrial-grade, die-cast aluminum electrical box
- Suitable for cold weather:
 -20°C (-4°F) (self-powered model, "CW" option) and
 -40°C (-40°F) (AC only and AC-DC models)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install Emergi-Lite® LPEXHZ Series LED exit signs. The equipment shall operate with universal two-wire AC input voltage from 120VAC to 347VAC at less than 3W and universal two-wire DC input voltage from 6VDC to 48VDC at less than 2W for single and double face signs. Designed specifically for hostile environments, the equipment frame shall be of industrial grade high impact thermoplastic with a gasket around lenses and canopy. The faceplate(s) shall be constructed of heavy-duty vandal-resistant polycarbonate and feature an even illuminated legend. The light source shall be light emitting diodes (LED). Red LED technology shall be ALINGAP. An LED-sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4" stroke letters with even illumination. The equipment shall be certified for Hazardous Locations: Class I Division 2 Groups A, B, C and D with a temperature code T6 Maximum 85°C (185°F). The equipment shall be designed specifically for high abuse areas, wet location, and cold weather -20°C (-4°F) applications. The self-powered model shall stay illuminated during emergency operation for at least 90 minutes upon AC failure and shall include a magnetic test switch and self-testing/self-diagnostic functions. The equipment shall automatically self test for 5 minutes every 30 days, 30 minutes every 60 days and 90 minutes annually. A "Service required" lamp shall be located near the test switch and flash when a fault is detected. A two-LED diagnostic display shall be located inside the equipment and shall identify the eventual source of failure (battery, charger circuitry, or LED lamps).

The exit sign shall be CSA-C860 approved and meets CSA 22.2 No. 141.

The equipment shall be Emergi-Lite® model: _

EHC Series

Pictogram exit combination unit–hazardous locations Class I Division 2- compliant

Features

- Certified Class I Division 2, Groups A, B, C and D as per CSA C22.2 No.137-M1981
- Certified CSA C22.2 No.141-10
- Polyvinyl chloride frame, with built-in gasket to prevent water infiltration
- Heavy-duty 1/8" thick aluminum back plate with keyholes for wall-mount installation
- Sealed, vandal-resistant faceplate of polycarbonate
- Legend illuminated by long-life white LEDs
- Comes standard with two pictogram films for direction selection
- Two high-performance LED lamps shielded by a clear polycarbonate cover
- 5W LED emergency lights provide 60' of egress illumination on a 6-foot wide path
- LED emergency lights provide 30-36' of egress illumination on a 6-foot wide path
- Sealed, maintenance-free lead-calcium or nickel-cadmium batteries
- Remote load capacity: covers with LED lights 100 ft up to 230 ft of egress illumination
- Comes standard with auto-diagnostic
- Cold-weather option: -40°C (-40°F) with only 14W extra power consumption
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install **Emergi-Lite® EHC Series** combination emergency light battery unit and pictogram sign. Designed specifically for hazardous locations, the equipment frame shall be of industrial grade polyvinyl chloride with gaskets around both sides of the frame contour. The back plate shall be made of 1/8" thick aluminum sheet and shall include knock-outs for installation on an electrical box and four keyholes for alternative installation on a wall surface. The faceplate shall be constructed of heavy-duty vandal-resistant clear polycarbonate and feature a uniformly illuminated pictogram legend.

The unit shall come standard with two legend films for pictogram and direction selection. The light source shall be long-life white light-emitting diodes (LED). The unit shall have attached a lower compartment containing two emergency heads with adjustable swivels and long-life LED lamps of ______ V and ______ W. The heads shall be installed on a shield housing made of cast aluminum and protected by a shock-absorbent, clear polycarbonate cover. The standard AC input voltage shall be 120/347VAC. The equipment shall be equipped with a magnetic test switch and one LED pilot light protected by the faceplate.

The unit shall perform auto-test functions managed by a micro- controller and shall automatically self-test for one minute every 30 days, 10 minutes in the 6th month and 30 minutes annually. When a fault is detected, the bi-color pilot light shall turn from green to red and flash following a particular code. The code description shall be displayed on a label next to the pilot light to identify the failure type: battery, charger circuitry, LED lights for the signage, or emergency lights. The combination unit shall be approved CSA C22.2 No. 141-10 and No.137-M1981 for Class I Division 2 Groups A, B, C and D.

The combination unit shall be Emergi-Lite® model: _____.

Combination unit – hazardous location, Class I, Zone 2C

Features

- Includes the addition of Class II Div 1 & 2 Groups E, F and G as well as Class III ratings
- Certified Class I Zone 2, Groups IIA, IIB and IIC
- Certified Class I Division 2, Groups A, B, C and D as per CSA C22.2 No. 137-M1981
- Certified temperature Codes for several types of emergency lamps
- Certified CSA C22.2 No. 141 and C860
- Polymeric frame, with built-in gasket to prevent water infiltration
- Heavy-duty 1/8" thick aluminum back plate with keyholes for secure wall-mount installation
- Sealed faceplate of heavy-duty, vandal-resistant polycarbonate
- Suited for areas with the risk of flammable gases, vapors or liquids that can create an explosive atmosphere
- Exit sign module illuminated by long-life, energy-efficient **ALINGAP** red LEDs
- Two LED lamps, shielded by a cast aluminum housing and a polycarbonate cover
- Sealed, maintenance-free, lead-calcium or nickel-cadmium batteries
- Remote load capacity
- Comes standard with auto-diagnostic functions
- + 1/2" electrical conduit entry on both sides and at the top
- NEXUS[®] compatible (for more information on NEXUS[®], contact your sales representative)
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install Emergi-Lite® EXHZ Series combination emergency light battery unit and LED exit sign. Designed specifically for hostile environments, the equipment frame shall be of industrial grade polymer with gaskets around both sides of the frame contour. The back plate shall be made of 1/8" thick aluminum sheet and shall include knockouts for installation on an electrical box and four keyholes for alternative installation on a wall surface. The faceplate shall be constructed of heavy-duty vandal-resistant polycarbonate and feature a uniformly illuminated legend. The light source shall be light emitting diodes (LED). Red LED technology shall be ALINGAP. An LED sensitive diffuser shall be mounted behind the legend to provide the 6" high by 3/4" stroke letters with even illumination. When specified, the equipment shall have attached a lower compartment containing two emergency lights with adjustable swivels and long-life LED lamps of ____ ___ V and ______ W. The lamps shall be shielded by cast aluminum housing and protected by a shockabsorbent, transparent polycarbonate cover. The equipment shall be certified for Hazardous Locations: Class I Division 2 Groups A, B, C and D. The standard AC input voltage shall be 120/347VAC. The equipment shall be equipped with a magnetic test switch located behind the faceplate and two LED pilot lights: AC-on and "Service required". The unit shall include selftesting/self-diagnostic functions monitored by a micro-controller and shall automatically self test for one minute every 30 days, 10 minutes in the 6th month and 30 minutes annually. The "Service required" LED shall light when a fault is detected. A four-LED diagnostic display located inside the equipment shall identify the source of the failure (battery, charger circuitry, or lamp load).

The combination unit shall be Emergi-Lite® model:_____

New product

Hazardous location pictogram sign TS Series transfer panel

Features

- CSA certified for use in hazardous locations:
- Class I, Division 1 and 2, Groups A, B, C, D
- Class II, Division 1 and 2, Groups E, F, G - Class III, Divisions 1 and 2
- Very low temperature codes (see table)
- Listed CSA C22.2 No.137-M1981
- Listed CSA 22.2 No.141
- Lighting fixture of die-cast aluminum with gray epoxy powder coat finish
- Legend housing of industrial-grade 14-gauge steel with gray enamel finish
- Supplied standard with two pictogram films per face, for direction selection
- Long-life white LED light source
- Two-wire AC/DC input available in 6, 12, 24 or 120V
- Energy efficient consumes maximum 4.0W in AC and DC mode
- Warranty details at: www.emergi-lite.ca

👀 🌞

Typical specifications

Supply and install the **Emergi-Lite® EX Series** remote pictogram signs. The lighting fixture shall have a die-cast aluminum body with gray epoxy powder coat finish and a transparent glass globe. The light source shall be long-life light-emitting diodes (LED) in a lamp assembly rated ______V. The LED assembly shall emit white light and shall consume less than 4W in AC or DC current. The legend housing shall be of industrial-grade 14-gauge steel with gray enamel finish. The faceplate(s) shall consist of three layers: a white translucent panel, a green/clear legend film and a clear polycarbonate panel for rigidity enforcement. Each faceplate shall come standard with two legend films per face, for direction selection.

The equipment shall be certified CSA C22.2 No. 137-M1981 for Hazardous Locations: Class _____, Division _____,

Groups _____, with the temperature code: .

The equipment shall be certified CSA 22.2 No.141

The equipment shall be **Emergi-Lite®** model: ____

LPEX-XP Series

Hazardous location "Exit" sign TS Series transfer panels

Features

LPEX-XP Series remote exit signs

- CSA certified for use in hazardous locations:
- Class I, Divisions 1 and 2, Groups A, B, C, D
- Class II, Divisions 1 and 2, Groups E, F, G
- Class III, Divisions 1 and 2
- Die-cast aluminum body with grey epoxy powder coat finish
- Exit housing and faceplate made of industrial-grade 14-gauge steel and finished in grey enamel
- Faceplate features universal knockout chevrons
- Two-wire input circuit for both AC and DC inputs
- Available in 6, 12, 24 and 120VAC/DC
- LED lamp with **ALINGAP** LEDs; consumes less than 5W in AC and DC mode
- New, easy-to-build catalogue number based on the **Emergi-Lite®** severity codes
- Listed CSA C22.2 No. 137-M1981
- Listed CSA 22.2 No. 141
- Also available as self-powered exit sign, battery unit and combo unit; see **EXP** catalogue sheet

TS Series transfer switch

- Available with explosion-proof housing (Class 1, Division 1) or NEMA-1 housing (for use outside the hazardous location area)
- Standard AC input: 120VAC, optional 277VAC, 347VAC; standard DC input: 6, 12 or 24VDC
- Two-wire output with permanently present AC/DC low voltage
- Output power: 25W, can drive up to five (5) units of the LPEX-XP remote exit series
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the **Emergi-Lite®** LPEX-XP Series remote exit sign. The exit housing shall be industrial grade 14-gauge steel and finished in grey enamel. The faceplate will be constructed of heavy-duty 14-gauge steel and feature universal knockout chevrons and the red letters shall not be less than 6" in height with a 3/4" stroke. The sign shall come complete with a ______ Volt LED lamp, and function from one voltage source only, in AC and DC current. The LED Lamp shall use **ALINGAP** LEDs and shall consume less than 5W in either AC or DC current.

The equipment shall be certified CSA C22.2 No. 137-M1981 for hazardous locations: Class _____, Division _____, Group _____ with the temperature code _____.

The equipment shall be certified 22.2 No. 141.

The exit sign shall be **Emergi-Lite**® model: _____

TS Series transfer switch:

Supply and install the **Emergi-Lite® TS Series** transfer switch for hazardous location remote exit signs. The unit shall have two voltage inputs: ______ VAC and ______ VDC and shall be able to maintain an output of ______ V 25W for the permanent supply of a total of five remote LED exit signs.

The transfer switch shall be suitable for Class _____, Division _____, Group _____ or for a NEMA1 environment. The unit shall be **Emergi-Lite®** model: ______.

Power consumption and unit rating

Model		AC specs		DC specs
	6VAC		6VDC	
AC/DC red	12VAC	Less than 5W	12VDC	
two-wire	24VAC	Less than 5W	24VDC	Less than 5W
	120VAC		120VDC	

Note: Exit signs of 6, 12 or 24 V must be connected through transfer panels; maximum five exit signs per panel.

C8SRXP Series

"Sortie" sign and transfer panels for hazardous locations

Features

Remote Sortie Sign Series

- CSA certified for use in hazardous locations:
- Class I, Divisions 1 and 2, Groups A, B, C, D
- -Class II, Divisions 1 and 2, Groups E, F, G
- Class III, Divisions 1 and 2
- Die-cast aluminum body with grey epoxy powder coat finish
- Sortie sign housing and faceplate made of 14-gauge steel, grey enamel finish
- Faceplate features universal directional chevrons (knockouts)
- Two-wire circuit for both AC and DC inputs
- Available in 6, 12, 24 and 120VAC/DC
- Light source is **ALINGAP** LEDs; consumes less than 5W in AC or DC mode
- New, easy-to-build catalog number based on the Emergi-Lite[®] severity codes
- Listed CSA C22.2 No. 137-M1981
- Listed CSA 22.2 No. 141
- Also available as self-powered exit sign, battery unit and combo unit; see **EXP** catalogue sheet

Transfer switch

- Available with housing for hazardous locations
- (Class 1, Division 1) or NEMA-1 housing (for use outside the hazardous location area)
- Standard AC input: 120VAC, optional: 277VAC, 347VAC
- Standard DC input: 6, 12 or 24VDC
- Two-wire output with permanently present AC/DC low voltage
- Output power: 25W, can drive up to five (5) remote units
 Series C8SRXP
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the **Emergi-Lite® C8SRXP Series** remote "SORTIE" sign. The exit housing shall be industrial grade 14-gauge steel and finished in grey enamel. The faceplate will be constructed of heavy-duty 14-gauge steel and feature universal knockout chevrons and the red letters shall not be less than 6" in height with a 3/4" stroke. The sign shall come complete with a ______ Volt LED lamp, and function from one voltage source only, in AC and DC current. The LED Lamp shall use **ALINGAP** LEDs and shall consume less than 5W in either AC or DC current.

The equipment shall be certified CSA C22.2 No. 137-M1981 for hazardous locations: Class _____, Division _____, Group _____ with the temperature code _____.

The equipment shall be certified 22.2 No. 141

The sortie sign shall be **Emergi-Lite**® model: ______

TS Series transfer switch:

Supply and install the **Emergi-Lite® TS Series** transfer switch for hazardous location remote exit signs. The unit shall have two voltage inputs: ______ VAC and ______ VDC and shall be able to maintain an output of ______ V 25W for the permanent supply of a total of five remote LED exit signs.

The transfer switch shall be suitable for Class _____, Division _____, Group _____ or for a NEMA1 environment.

The unit shall be Emergi-Lite® model: ____

Power consumption and unit rating

EXP LED "Picto" Series

Battery units, self-powered pictogram signs, combination units

Features

CSA certified for use in hazardous locations

The **EXP LED Pictogram Series** of battery equipment is designed to cover emergency lighting applications for the entire spectrum of hazardous locations, where inflammable gases, vapors, liquids, dust particles or fabrics tissues are permanently present or are likely to exist.

The **EXP LED Pictogram Series** combines in one simple-toorder catalogue family three traditional emergency lighting products with battery back-up: battery units with emergency lights, self-powered pictogram signs, and combination units with emergency lights and pictogram sign. The equipment is also available with additional emergency power capacity to drive remote heads and pictogram signs.

*Comes with arrow and no arrow.

- CSA certified for use in hazardous locations:
 - Class I, Division 1, Groups B, C, D
 - Class I, Division 2, Groups A, B, C, D
 - Class II, Divisions 1 and 2, Groups E, F, G - Class III, Divisions 1 and 2
- For wall mount only
- Die-cast aluminum body with grey epoxy powder coat finish; clear, impact and heat resistant prismatic glass globe
- Long-life, maintenance-free lead-calcium battery
- Battery charger is current limited, temperature compensated, short-circuit proof and reverse polarity protected
- Emergency heads with one or twin lamp design
- Large self-powered combo includes a transfer circuit to drive an additional three (3) remote pictogram signs (total power max 15W)
- Easy-to-build catalogue number based on the **Emergi-Lite**® severity codes
- Meets or exceeds CSA 22.2 No.141-15 & No. 137
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the Emergi-Lite® EXP LED Pictogram Series of hazardous location battery unit equipment. The battery unit housing will be constructed of die cast aluminum with grey epoxy powder coat finish and equipped with heavy-duty key holes for wall mount. The equipment shall be rated for 120, 277 or 347V, 60 Hz input and be CSA listed. The equipment shall have an output of _ _V and W and shall supply the rated load for a minimum of a 1/2 hour to 87.5% of the rated battery voltage. The battery shall be a long-life, maintenance-free lead-calcium type. The charger shall be fully computer tested and have its charge voltage set in the factory to ± 1% tolerance. The charger shall be current limited, temperature compensated, short circuit proof and reverse polarity protected. The charger shall be furnished with an electronic lockout circuit, which will connect the battery when the AC circuit is activated, and an electronic brownout circuit.

Where required the equipment shall come complete with ______ heads, each of them equipped with ______

lamp(s) of _____ W.

The head housing shall be die-cast aluminum with grey epoxy powder coat finish. The lenses shall be a clear, impact and heat resistant prismatic glass globe. The head shall be factory sealed, with no need for external seals.

Where required the equipment shall come complete with one pictogram sign and will include a transfer circuit to maintain the pictogram sign permanently lighting in both normal and emergency operation. The picto housing shall be industrial grade 14-gauge steel and finished in grey enamel. The faceplate will be constructed of heavy-duty 14-gauge steel.

The equipment shall be certified CSA C22.2 No.137-M1981 for hazardous locations: Class _____, Division _____, Group _____ with the temperature code _____.

The pictogram sign shall be CSA C22.2 No.141-10 certified.

The equipment shall be Emergi-Lite® model:_

Temperature codes for EXP-P series – measured at 40°C ambient

Explosion-proof equipment is composed of one or more modules, each of them qualified for a specific temperature code. The temperature code of the complete equipment (enclosure + picto sign + emergency heads) is defined as the most severe of the temperature codes identified for each of the modules below.

Severity code	S1	S 2	S 3	S4

The charger shall be current limited, temperature compensated, shortcircuit proof and reverse polarity protected. The charger shall be furnished with an electronic lockout circuit, which will connect the battery when the AC circuit is activated, and an electronic brownout circuit. Where required the equipment shall come complete with

_____ heads, each of them equipped with _____ lamp(s) of _____ W. The head housing shall be die-cast aluminum with grey epoxy powder coat finish. The lenses shall be a clear, impact and heat resistant prismatic glass globe. The head shall be factory sealed, with no need for external seals.

Where required the equipment shall come complete with one sortie sign and will include a transfer circuit to maintain the sortie sign permanently lighting in both normal and emergency operation. The exit housing shall be industrial grade 14-gauge steel and finished in grey enamel. The faceplate will be constructed of heavy-duty 14-gauge steel.

The equipment shall be certified CSA C22.2 No.137-M1981 for hazardous locations: Class _____, Division _____, Group _____ with the temperature code _____.

The Sortie Sign shall be CSA C22.2 No.141-10 certified.

The equipment shall be **Emergi-Lite®** model:

Temperature codes for EXP-P Series – measured at 40°C ambient

Explosion-proof equipment is composed of one or more modules, each of them qualified for a specific temperature code. The temperature code of the complete equipment (enclosure + picto sign + emergency heads) is defined as the most severe of the temperature codes identified for each of the modules below.

Severity code	S1	S 2	S 3	S4
Temperature	Т6	Т6	Т6	Т6
code	85°C (185°F)	85°C (185°F)	120°C (248°F)	85°C (185°F)

ET Series

Power-free pictogram sign

Features

- Illumination provided by borosilicate glass tubes, internally coated with zinc sulphide phosphor and filled with tritium gas
- Minimum brightness at time of manufacture is 0.132 footlambert (0.452 cd/m2)
- · Decorative, slim-line heavy-duty ABS housing
- Rugged, impact-resistant polycarbonate face
- Spark-free construction
- Simple installation universal direction capability, comes complete with universal mounting hardware
- Stands up to extreme temperatures in outdoor or indoor applications
- Life expectancy of 10 years (pictogram)
- Available in single or double face
- Certified to standard UL924 (ULC-S572)
- Pictogram sign includes universal stencils (straight from here, left from here and right from here)
- Warranty details at: www.emergi-lite.ca

Made in Canada

Typical specifications

Offered in a variety of colours and lengths, **Emergi-Lite® Pendant Kits** are designed to facilitate the installation of exit signs at regular mounting heights.

Compatible with both horizontal and sloped ceilings, these pendant kits are truly universal and will adapt to any application.

Please consult your sales representative.

Special Wording

Illuminated signage

Typical specifications

Custom-worded, illuminated signage is available using the same sturdy construction and electrical design as Emergi-Lite® exit signage.

A wide range of sign body options and colour choices are available to suit any application.

Contact your local Emergi-Lite® sales representative to discuss your specific requirements.

Features

- The same sturdy construction and electrical design used in our exit signs is used to produce our custom-worded, illuminated signage
- · Sign bodies steel, extruded and die-cast aluminum, weatherproof, flame-retardant polycarbonate, high impact thermoplastic, recessed housing
- Also available with self-powered canopy and with emergency lamps
- Custom wording any style of lettering, any language, any alphabet, any special characters
- Graphics logos, standard symbols, custom art
- Colour choices sign bodies, message, faceplate panel
- Illumination LED (light-emitting diodes) other light sources available - consult representative
- White-out, black-out and split picture options
- · Warranty details at: www.emergi-lite.ca

Glossary

U	Auto-diagnostic	Automatically tests and continuously monitors your emergency lighting unit. If a problem occurs, the unit will send a visual (flashing or blinking LED indicator) and audible warning. Complies with Fire Code requirements.
UN	Auto-diagnostic (non-audible)	Automatically tests and continuously monitors your emergency lighting unit. If a problem accurs, the unit will send a visual (flashing or blinking LED indicator) warning. Complies with Fire Code requirements.
CW1	Cold weather, 120VAC	120VAC input cold weather protection feature for applications where temperatures can reach -40° C.
CW3	Cold weather, 347VAC	347VAC input cold weather protection feature for applications where temperatures can reach -40° C.
NEX	NEXUS° system interface	The NEXUS [®] system interface is a computerized maintenance system for emergency lighting that, once programmed, will perform the tests, keep written records and send a notification if anything needs to be fixed. One full system can address hundreds of units in as many buildings as you need from a single location.
D/D3	Time delay (15 minutes)	Normally, when the AC power is restored, all emergency lighting lamps are turned off. However, in some cases, such as when metal halide lamps are used, it is possible that the general lighting will not be available for several minutes after the blackout (or brownout) period. Battery units with the D3 option will keep some energy in store to ensure that the emergency lighting stays on or comes back on for at least 15 minutes once the regular AC power has been restored.
ТР	Tamper-proof screws	Screws that require a special bit. Can be used on certain units to deny access to unauthorized personnel.

BATTERY UNITS

Battery units overview

Emergency lighting, as part of life safety equipment, is one of the key elements to ensure public safety within buildings.

In the event of failure of the normal power supply, self-powered units automatically provide the illumination required to evacuate the building in safe conditions.

Standards and codes

Requirements for the installation, level, and duration of emergency lighting in buildings are established by national standards: The National Building Code of Canada (NBCC-2015), the Canadian Electrical Code (CEC), and the National Fire Code of Canada (NFCC- 2015). Concerning the equipment, performance is established by the Canadian Standards Association (CSA), for example, C22.2 No.141- 15, C860, etc. Emergency lighting equipment is divided into two main categories: self-powered emergency lighting equipment, also referred to as "unit equipment for emergency lighting", and central emergency power systems (separate emergency electrical power supply).

Self-contained (or self-powered) equipment

The most common self-powered unit consists of a 6V lead battery and two lamp heads, also referred to as emergency lights, each with a 4W LED lamp. Lamps are normally off; the storage battery has sufficient capacity to actuate and maintain the emergency lighting for at least 30 minutes in the event of a power failure. In some applications described in the National Building Code of Canada, the minimum emergency lighting period can reach 60 minutes or even 120 minutes. This will require battery units of greater capacity. Once normal AC power supply is restored, heads will turn off, the fixture recharges the batteries to full capacity within 24 hours, then returns to the standby mode.

Battery units and remote heads

There are also battery-powered units that will supply power to several remote emergency lights of different wattages (12W, 20W, 50W, etc.). In this case, remote emergency lights (also referred to as remote heads) are installed in rooms and corridors, connected by wiring installed inside the walls. Some 6V self-contained fixtures can assume a total emergency lighting load up to 150W – 180W. At this level, the battery current (25A – 30A) begins to generate significant losses in the external wiring. For this reason, there are battery units of higher voltages, 12V and 24V, which can respectively supply power to remote heads totaling up to 360W and 720W.

Central systems

A higher wattage capacity emergency system is a Central System. In the event of a utility power failure, Central Systems continue to supply power to the emergency lighting equipment as well as other critical loads. A Central System that supplies power during a utility power failure is an emergency power system, the Alternating Current Central System (AC inverter). The electric power supplied by this system can vary from a few KVAs to 54 KVAs.

Industrial environment

The industrial environment is the most severe in terms of housing construction requirements. It is defined by several parameters specific to various technical processes within the industry: temperature range, degree of humidity, degree of protection against water and dust, resistance to corrosive chemicals, presence of flammable gases and vapors or combustible particles, etc. An important performance factor is the degree of protection against solid particles (dust, etc.) and liquids. This rating is generally defined and measured as established by the American standard NEMA 250-2003 from the National Electrical Manufacturers Association, or, alternately, the European IP (ingress protection) code of the International Electrotechnical Commission (IEC 60529 standard). To accomplish the required degree of protection and resistance to corrosive agents, emergency lighting fixtures are designed/fabricated with gasketed, rugged, polycarbonate or fiberglass housings. A special category exists covering hazardous areas, defined by technological processes generating (or susceptible to generate) flammable gases, vapors, flammable liquids or combustible dust particles in explosive concentrations in the atmosphere. For more details on definitions and classifications of hazardous areas, consult the Canadian Electrical Code (CSA C22. 1-15).

Considering the risks of explosion or fire, all equipment dedicated to hazardous areas must meet, special standards such as CSA C22.2 No. 30-M1986, No. 137-M1981, No. 213-M1987, etc. Based on each respective classification (Class, Division, Group, Zones), enclosures and remote heads for hazardous areas are fabricated of materials which must meet stringent requirements (pure forged aluminum, fiberglass, etc.) and may require specific components, such as seals, valves, gasketing, etc in addition to standards specific to emergency lighting. In view of all these additional specific characteristics, it can be expected that emergency lighting equipment approved for hazardous areas will cost more than fixtures classified for general industrial applications.

Considering the risks of explosion or fire, all equipment dedicated to hazardous areas must meet, in addition to standards specific to emergency lighting, special standards such as, CSA C22.2 No. 30-M1986, No. 137-M1981, No. 213-M1987, etc. Based on each respective classification (Class, Division, Group), enclosures and remote heads for hazardous areas are fabricated with materials that must meet stringent requirements (pure forged aluminum, fiberglass, etc.) and may require specific components, such as seals, valves, gasketing, etc.

Emergency lighting enclosures

Construction requirements for emergency lighting fixtures depends on the location where the equipment can be installed. Of all the components, the enclosure (box or housing) is probably the most affected by the type of environment where it is located.

The enclosure plays many roles: it provides the fixture with a degree of protection against the environmental conditions, while meeting technical, aesthetic and functional requirements. Of course, cost can also be a deciding factor when selecting a fixture.

In general, non-residential lighting is divided in three market segments: commercial, institutional and industrial. This market segmentation still applies in the case of emergency lighting. Typically, the commercial and institutional sectors are more sensitive to aesthetics, whereas the industrial sector is more influenced by the technical aspects (fixture durability, etc.).

Commercial and institutional environments

Commercial spaces (stores, restaurants, theatres, hotels, etc.) as well as institutions are generally air conditioned, so the equipment operates in normal temperature and humid conditions. The most common design for self-contained units uses sheet metal housings of a neutral colour: white or whist. For the most part, exit signs are housed in a rectangular box fabricated of steel (sheet metal) die- cast or extruded aluminum, and illuminated from a LED light source contained within the assembly (back-lit). Some molded plastic housings also exist (less expensive material, but also less rigid than metal) – mostly used for small battery units (lower wattages) and EXIT signs in some applications. Even if aesthetics is a secondary criterion, we continue to develop products which offer a more contemporary look.

Aesthetics and architecture

Aesthetics and architecture are often the most important criteria on the decision process. Some hotel chains, high-end stores and corporate headquarters are excellent examples.

In these situations, the architect and the lighting designer have a great influence in specifying emergency lighting fixtures. The question becomes – what will the architect prefer, a more decorative, unique look or a more unobtrusive, discreet one? Battery units are becoming increasingly discreet. The specifier can opt for a higher capacity unit (e.g.: 24V, 720W or a central System) installed in a hidden location, to supply power to remote heads distributed throughout the building. Another option would be to install recessed self-contained units concealed in the ceiling (T-bar), each with two lamp heads and additional capacity for remote heads. There are also single-lamp battery units that can be recessed in the ceiling. As for remote heads, they are generally fabricated of forged aluminum and contain MR16 LED lamps. It is also possible to conceal the battery units as well as the lamp heads entirely.

To address specifiers' needs for aesthetics, we have developed new products for high end emergency lighting: dual-function decorative luminaires providing both normal lighting and emergency lighting. The lamps are powered by one of the two independent electrical circuits: AC circuit for normal lighting (including the wall switch), and an uninterrupted AC circuit for the battery charger and control of the emergency lighting. Since normal lighting levels are higher than those required for emergency lighting, we also offer the same type of luminaire for normal lighting only. This option provides the end user with the possibility of alternating self-contained units with standard lighting fixtures, while maintaining consistency of design.

The mini-inverter acts like a central system but with less installation concerns and lower initial investment. Existing fixtures can function as emergency lighting with a Mini-Inverter. As an alternative to separate lighting fixtures, normally on light fixtures can be connected to the Mini-Inverter so they will function in an emergency. For specifiers who wish to preserve a design aesthetic in high-visibility areas, this option is extremely beneficial.

97

ERAU Series

Recessed architectural battery unit

Features

- Recessed installation in T-bar suspended ceiling and easily spring mounted in Gyproc ceiling
- All-metal backbox enclosure
- Thermoplastic rectangular fixture with additional round trim-plate, white finish
- Long-life, high-temperature rated lithium battery
- Infrared remote test control (up to 30ft)
- Two-wire universal AC input: 120 347VAC 50-60Hz
- 90 minutes of emergency lighting
- Fixed optics, optimized light distribution for ceiling heights of eight to 12 ft
- · Four high-intensity LED sources with redundant connections; CCT 5000K
- Listed NSF, splash non-food zones
- Certified cUL to CSA 22.2 No.141-15
- Optional housing for plenum or insulated ceilings (IC)
- Black thermoplastic decorative trim-plates
- · Power over ethernet supply (requires a dedicated PoE switch powered by unswitched AC line) available
- Nexus[®]Pro: IOT emergency lighting monitoring system optional
- Fixed, square distribution pattern up to 12-ft ceilings
- Self-test and diagnostic functions
- 1-year limited warranty
- · Warranty details at: www.emergi-lite.ca

Black

Nexus®Pro 🚯 🕼 ເ

Remote test control

Suggested specifications

Supply and install the ERAU Series of recessed emergency lighting unit from Emergi-Lite®. The unit construction shall include an all-metal housing and a thermoplastic rectangular trim-plate with a detachable circular trim ring for choice of aesthetics. The optics shall be an impact-resistant polycarbonate lens with fixed light distribution, optimized for ceilings of 8 to 12-ft height. The housing shall include an isolated compartment for electrical connections and a detachable cover with knockouts for electrical supplies. The unit shall include a hardware kit for installation in T-bar suspended ceilings.

The emergency lights shall be four high-intensity LED with operational life of minimum 36,000 hours, until 70% of the initial light level (reported L70). The LEDs shall have redundant interconnections: eventual failure of one of them shall allow others to function. The unit shall have a two-wire universal input rated 120-347VAC, 50/60Hz and shall be equipped with a lithium battery. The charger circuit shall provide: AC lockout, brownout transfer, and battery disconnect at the end of discharge. The charger shall be micro-controller-based and include self-test and diagnostic functions; the unit shall selftest for one minute every month, 30 minutes every six months and 90 minutes annually. The pilot light shall be a bi-color LED, installed behind the main optics and shall change color from normal green to flashing red when a failure is detected from the battery, charger circuit or lamps. A label located on the equipment housing shall describe the diagnostic for each flashing code. The unit shall be supplied with an infrared remote test control to start a manual test of one-minute duration or cancel it if needed.

The unit shall be cUL certified to CSA 22.2 No.141-15

The unit shall be Emergi-Lite® model: ___

Vandal resistant self-powered linear battery unit

Features

BATTERY UNITS

- High impact thermoplastic housing
- Meets IK10 impact rating requirements¹
- Standard surface ceiling and wall mount
- Optional accessory: semi-recessed ceiling mount
- Easily adjustable LED strips for multiple beam angles
- 1200-1300 lumen output
- Dual-mode: normal lighting (field selectable) and emergency lighting
- Self-test and self-diagnostic
- Lithium ion phosphate battery offering 120 minutes of emergency lighting
- Battery over/under charge protection
- Universal voltage 120V through 347V 60Hz
- Rated for 5°C to 45°C
- Suitable for wet locations
- Meets IP65 rating
- ROHS compliant
- cUL approved to CSA C22.2 No, 141-15
- Warranty details at: www.emergi-lite.ca

¹IK ratings refer to impact tests. IK10= Protected against 20 joules of impact (equivalent to 5KG of mass dropped from 40cm high)

Provider[™] Series

Features

- Injection-molded, impact-, scratch- and corrosionresistant thermoplastic with a snap-together design
- Compact and versatile unit measures only 11.75" x 5" and can be wall or ceiling mounted
- LED lamps with life expectancy of 50,000+ hours
- Maintenance-free, long-life sealed lead-calcium battery
- Fast and easy installation AC quick connect plug, battery knockout feature.
- Fully automatic, solid-state charger with low voltage battery disconnect, brownout protection, integral test switch and long-life LED AC-On pilot lights
- Charger is temperature compensated and reverse polarity protected
- NEXUS® compatible (For more information, please consult your sales representative)
- Optional ceiling mount includes safety wire pre-machined housing to receive a securement screw
- Meets or exceeds CSA 22.2 No.141-15
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Dimensions are approximate and subject to change

Typical specifications

The contractor will install the **Emergi-Lite® Provider™ Series** battery unit. The emergency lighting system shall consist of fully automatic equipment with two (2) emergency lighting heads. The emergency lighting heads shall require no tools for adjusting or aiming. Each unit shall contain a fully automatic, solid-state charger with test switch and AC-on pilot lights. The unit shall contain a sealed transfer circuit and low-voltage disconnect circuit. The unit equipped with self-testing/self-diagnostic or Nexus® features shall automatically self-test for one minute every 30 days, 10 minutes in the 6th month and 30 minutes annually. When a fault is detected, the bi-colour pilot light shall turn from green to red and shall flash, identifying the source of the failure: battery, charger circuitry, lamp load.

The battery shall meet 6V with a capacity of 20 or 36W for 30 minutes. The unit shall be CSA C22.2 no 141-15.

The unit shall be Emergi-Lite® model: CPRO _

Lux-Ray[™] LED Series

Rugged, versatile, sophisticated

Features

- Die-cast aluminum housing, available in four finishes: dark bronze, off-white, black, and platinum gray
- NEMA-3R Rated for indoor/outdoor wet and damp locations: -20°C to 50°C SD model
- Wall-mount installation on various junction boxes or via rigid conduit
- Patent-pending design for easy installation: wall-mount backplate includes electrical wire box with snap-on connector
- Patent-pending light engine: four power LEDs with redundant inter-connections and very wide beam
- Clear polycarbonate lens of reduced size (3" x 1.5"), shock-absorbent and UV-resistant
- Battery: high-temperature rated, nickel-metal hydride technology
- Power consumption in stand-by: less than 5W
- Self-test and diagnostic functions operated by micro-controller
- Certified to CSA 22.2 No.141-10 and No.250.0-08 standards
- 90 minutes run time
- Warranty details at: www.emergi-lite.ca

Options

- Cold weather: (-40°C... 30°C)
- Forward-throw light distribution, for applications of outdoor exit discharge (OSHA 1910.36)
- High-lumen output: 25 to 50% additional level of illumination compared to standard models
- Dual-mode operation: normal lighting and/or emergency lighting with separate AC inputs
- Photo-switch: dusk-to-dawn control of normal lighting
- Remote test: infrared remote control (keyboard
- ordered separately)
- Time delay: 15 minutes

(painted)

Typical specifications

Supply and install the Lux-Ray[™] Series of LED emergency lighting from Emergi-Lite[®]. The unit body shall include a back-plate and housing made of die-cast aluminum with paint finish color: ______ and a UV and impact-resistant polycarbonate lens of reduced size: 3-in by 1.5-in. The backplate shall have knockouts for wires and wall-mount installation box as well as a threaded hole for rigid conduit entry at the top of the unit. The back-plate shall have a built-in electrical box with wire terminals and snap-on connector. After complete electrical installation of the back-plate the equipment housing shall be installed by a simple push & snap over the back-plate.

The emergency lights shall be 4 (four) power light-emitting diodes (LED) with operational life of minimum 36,000 hours, maintaining at least 70% of the initial light level (reported L70). The LED lamps shall have redundant interconnections: eventual failure of one lamp shall allow other LED lamps to function. The unit shall have a dual-voltage input rated 120/347VAC, 60Hz. The battery charger shall include low voltage disconnect to prevent deep discharge, battery lockout to prevent battery drain prior to energizing the utility power, and brownout protection which will automatically switch the unit into emergency mode if the utility power falls below 80% of nominal level. The unit with nickel-metal hydride battery shall be equipped with a micro-controllerbased non-audible auto-test circuit and provide minimum 90 minutes of emergency lighting. The unit shall self-test for one minute every month, 30 minutes every six months and 90 minutes annually.

The pilot light shall be integrated with the test button; it shall be a bi-color LED and shall change color from normal green to flashing red when a failure is detected from the battery, charger circuit or lamps. A label located near the pilot light shall describe the diagnostic for each flashing code. When specified, models with dual-mode illumination shall include two separate AC input circuits: un-switched for emergency lighting and switched for normal lighting. When specified, models equipped with photo-switch shall automatically activate the normal lighting only from dusk till dawn, for additional energy savings. The typical ambient illumination for the photo-switch shall be 10 lux (to turn-on) and 30 lux (to turn-off).

When specified, the unit shall be controlled by an **infrared remote control** keypad (part#: TB-RC1-E ordered separately). The remote control shall be able to simulate a power failure of 1 minute, 30 minutes or 90 minutes and also to cancel the test in progress at any time. For units with dual-mode lighting the remote keypad shall also control the normal lighting with on/off switch and dimming functions. The unit shall be certified to CSA 22.2 No.141-10 for minimum 90 minutes and No.250.0-08 standards.

The equipment shall be Emergi-Lite® model:

Platinum grev

Lux-Ray[™] LED Series

Retract-a-Lite[™] Series

100% recessed emergency lighting

Features

- Door flips 180° when AC fails
- Fully automatic operation brown-out sensitive transfer circuit automatically goes to emergency lighting mode and, when the power is restored or at the end of battery discharge, the motor turns the door back to its original closed mode (time delay option required).
- Customized finish unit sold in white but can be painted or wallpapered on site to match existing décor
- Heavy-duty back-box made of heavy-duty, galvanized steel
- High-performance lighting-includes two LED lamps; power range from 2x4W up to 2x6W
- Patent-pending design
- Meets or exceeds CSA 22.2 No.141
- Advanced diagnostics capabilities (specific load requirements)
- · Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install Emergi-Lite[®] Retract-a-Lite[™] Series. The unit shall be designed to be concealed in walls or ceilings with a cavity, including T-bar suspended ceilings. Bar hanger brackets shall be provided with the self-powered unit. The unit equipment shall come standard with a metal back box containing the batteries, the lamp assembly and a charging circuitry. The back box shall be constructed of heavy-duty galvanized steel. The unit components: battery assembly, charger circuitry and lamp assembly shall have a modular design and come standard with guick-connect plugs for easy installation in the back box. The unit equipment shall be completely concealed in the wall or ceiling during normal power conditions. Upon a power failure the unit will expose the emergency heads by rotating its door 180° and then power the lamps. At the restoration of the AC power or at the end of the battery discharge, the lamps will turn off and the unit will retract the heads in the wall (ceiling) by rotating the door by 180°. Under normal conditions, the only visible parts of the unit shall be the flat door and trim plate, coated with a high-quality off-white finish that can be customized on site with paint or other suitable wall covering. The light source shall be 12V LED lamps of specified wattage and light output. The unit shall supply the rated load for a minimum of 30 minutes or until the battery is discharged to 87-1/2% of its nominal voltage (whichever duration is longer). The charger circuitry shall utilize a micro-controller IC that samples the battery in relation to the ambient temperature, state of charge, and input voltage fluctuations. The charger shall be current limited, temperature compensated, short- circuit proof, and reverse-polarity protected. The circuit will charge in accordance with CSA C22.2 - 141 requirements. The unit shall be furnished with a recessed, illuminated push button serving as test switch and status indicator light. When specified, the unit shall come complete with Emergi-Lite® auto-test micro-controller circuitry to ensure the equipment readiness and reliability by continuously monitoring every critical function of the unit. If a problem occurs, the pilot light located on the front of the unit will change color from green to red and will flash indicating a fault. A detailed diagnostic legend shall be available on the door back side and shall provide fault identification (battery, charger circuitry, lamps) for maintenance personnel. The auto- test shall simulate a power loss for one minute monthly, 10 minutes every 6 months, and a full 30-minute test every 12 months.

The equipment shall be **Emergi-Lite®** model:

Mini Retract-a-Lite[™] Series

The next generation unseen solution

Features

- Easy to retrofit in finished walls: the unit slides in through an 8.25" by 5.75" hole
- No back-box needed to pre-install
- Input: standard AC input 120/347VAC; optional 120/277VAC
- Output: 12VDC with up to 100W of power
- Battery: choice of sealed, maintenance-free lead-calcium or nickel-metal hydride
- Remote capacity: can drive several wall or ceiling-mount 12VDC remote Retract-a-Lite™ fixtures
- Charger: micro-controller driven, temperature compensated, high precision, fast recharge
- Remote AC fixture: direct connection to 120 or 347VAC power generators
- MR16 LED lamps 4W, 5W and 6W
- Certification: CSA C22.2 No.141
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install Emergi-Lite[®] Mini Retract-a-Lite[™] Series. The unit shall be designed to be completely concealed in walls with a cavity. The equipment shall consist of a metal housing containing two modules joined by a flexible bracket and electric conduit. One module contains the battery, charger circuitry and electrical connection box; the other module contains the emergency lights installed on the back of a door able to rotate several turns of 360°. The unit equipment shall be completely concealed in the wall after installation through a rectangular opening not larger than 8.25" by 5.75". In stand-by mode, the only visible parts of the unit shall be the flat door and trim plate, coated with a high-quality off-white finish that can be customized on site with paint or other suitable wall covering. Upon a power failure the unit will expose the emergency heads by rotating its door 180° and then will power the lamps. At the restoration of the AC power or at the end of the battery discharge, the lamps will turn off and the unit will retract the heads by rotating the door 180° in the same direction. The unit shall not require the presence of AC power in order to close the door and conceal the lights. The door of the unit shall be easy to force-turn (open or close) by hand, in any rotation direction. The light source shall be 12V MR16 LED lamps of specified technology, wattage and light output. The unit shall supply the rated load for a minimum of 30 minutes or until the battery is discharged to 87.5% of its nominal voltage (whichever duration is longer). The charger circuitry shall utilize a micro-controller IC that samples the battery in relation to the ambient temperature, state of charge, and input voltage fluctuations. The charger shall be current limited, temperature compensated, shortcircuit proof, and reverse-polarity protected. The circuit will charge in accordance with CSA C22.2 - 141 requirements. The unit shall be furnished with a recessed, illuminated push button serving as test switch and status indicator light. When specified, the unit shall come complete with the Emergi-Lite® series of auto-test micro-controller circuitry to ensure the equipment readiness and reliability by continuously monitoring every critical function of the unit. If a component failure occurs, the pilot light located on the front of the unit will change colour from green to red and will flash indicating a fault. A detailed diagnostic legend shall be available on the back side of the door and shall provide fault identification (battery, charger circuitry, lamps) for maintenance personnel. The auto-test shall simulate a power loss for one minute monthly, 10 minutes every 6 months, and a full 30-minute test every 12 months.

The equipment shall be Emergi-Lite® model: ______.

BATTERY UNITS

Premier[™] Series

Thermoplastic, 6 and 12V

Features

BATTERY UNITS

- Designed with aesthetics, ease of installation and performance in mind
- Simple, compact and contemporary design
- Wall-mount, ceiling-mount flat or pendant installation
- Two-piece housing of injection-molded thermoplastic
- Two MR16 halogen lamps, shielded by clear polycarbonate covers
- Available with long lasting MR16 LED lamps
- Sealed, maintenance-free, lead-calcium battery
- Dual voltage input: 120/347VAC.
- Up to 150W of total battery capacity
- Auto-diagnostics (optional)
- NEXUS[®] interface (optional)
- Certified CSA 22.2 No.141
- Warranty details at: www.emergi-lite.ca

Typical specifications

mount or as otherwise specified.

Supply and install the **Emergi-Lite® Premier™ Series** battery unit equipment. The unit construction shall include a housing and a front cover of high-impact thermoplastic moulded in white. No screws shall be necessary to hold the front cover to the housing. The unit shall be equipped with two emergency heads with adjustable swivels and MR-16 lamps of _____ V _____ W protected by snap-on shock-absorbent, clear polycarbonate covers. The unit shall be suitable for wall

The unit equipment shall have a dual-voltage input of 120/347VAC and shall be equipped with a test switch and a green pilot light, located on the left side. The housing shall host the battery and the battery charger. The battery charger and other unit functions shall be driven by a micro-controller. All electronic circuitry shall be installed on a single printed circuit board.

When specified, the unit equipped with auto-test shall automatically self-test for one minute every 30 days, 10 minutes every 6 months and 30 minutes annually. When a fault is detected, the bi-colour pilot light shall turn from green to red and start flashing. A legend on a label next to the pilot light shall display the source of failure: battery, charger circuitry or lamp load.

The unit equipment shall be listed to the standard CSA 22.2 No.141.

The unit equipment shall be Emergi-Lite® model: _____

Decorative 6, 12 and 24V thermoplastic cube units

Features

BATTERY UNITS

- Impact-resistant steel center cabinet contains the battery and charger
- Frosted, thermoplastic light cubes protect light modules against vandalism while providing visual masking and light diffusion
- Units can be wall or ceiling mounted
- Maintenance-free, sealed lead-calcium battery
- Fully automatic, solid-state charger with low voltage battery disconnect, brownout protection, integral test switch and LED AC-On pilot lights
- Also available as a remote fixture; see the Remote Fixtures section of this catalogue
- CSA C22.2 No. 141 certified
- NEXUS[®] compatible
- Warranty details at: www.emergi-lite.ca

In the same family

EF26/EF26DS/EF26D Series

Typical specifications

Supply and install a complete emergency lighting system as described herein and shown on the drawings.

The **Emergi-Lite® DEL Smart Diagnostic** micro-controller board shall supply the rated load for a minimum of 1/2 hour to 87.5% of the rated battery voltage. The unit shall be rated 120V or 347V, 60 Hz and be CSA listed.

The unit shall have an output of _____ V.

The charger shall be fully computer tested and its charge voltage factory set to ± 1% tolerance. Chargers with fieldadjusted potentiometers are not acceptable. A pulse-type charger shall be employed to promote long battery life and reduce the potential for grid corrosion. The charger shall provide a continuous high charge to recharge the battery, and when the battery is at full capacity, the charger will shut off. Periodically the charger shall provide a pulse of energy to keep the battery topped off. The charger shall be current limited, temperature compensated, short- circuit proof and reverse polarity protected. The unit shall be furnished with an electronic lockout circuit, which will connect the battery when the AC circuit is activated, and an electronic brownout circuit, which will activate the emergency heads when utility power dips below 75% of nominal voltage. A low voltage battery protection circuit shall be provided and will disconnect the battery from the fused output circuit at the end of discharge. The unit shall self-test for 1 minute every 30 days, 10 minutes every 6 months and 30 minutes every 12 months. The unit shall be capable of full recharge in compliance with CSA specifications. The unit shall be furnished with a sealed, dust-tight relay, a test switch and diagnostic LED indicator lights to continuously monitor the status of the unit: Battery Failure, Battery Disconnected, Charger Failure, Lamp Failure, Service Alarm, AC -"ON", Charger High Rate. The unit shall come complete with fully adjustable 12V or 24V/12W or 20W guartz halogen lamps. Each lamp shall be housed in an impact-resistant polycarbonate cube. The cube lens shall be frosted to diffuse light.

The unit shall be Emergi-Lite® model: _

6, 12, 24V T-bar unit

Features

Fully recessed units for T-bar mounting in suspended ceilings.

The **ESLT Series** battery units are designed for T-bar ceiling grid installation. This slim-line, unobtrusive unit is ideally suited for any commercial location where there is limited wall space and where the greater directional flexibility of ceiling-mounted heads is needed to provide greater light distribution.

- Rugged steel cabinet with corrosion-resistant undercoating.
- Battery and charger are concealed above the ceiling level in the unit cabinet
- Removable panel provides easy access to battery and circuitry
- Test switch and LED indicators are mounted on the visible bottom panel
- Units mount quickly and easily in standard 2' x 2' or 2' x 4' grids without any additional hardware
- Solid-state pulse-type charger current-limited, temperature-compensated, short-circuit proof and reverse-polarity protected
- Unit comes standard with electronic lockout and brownout circuits
- Sealed dust-proof transfer relay, test switch and LED indicator lights
- Long-life, maintenance-free lead acid battery
- NEXUS[®] compatible (for more information on NEXUS[®], please consult your sales representative)
- CSA C22.2 No. 141 certified
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Black

Typical specifications

Supply and install a complete emergency lighting system as described herein and shown on the drawings.

The **Emergi-Lite® Smart Diagnostic** Micro controller board shall supply the rated load for a minimum of a 30 minutes to 87.5% of the rated battery voltage. The unit shall be rated 120V or 347V, 60 Hz and be CSA listed. The unit shall have an output of ______ V.

The charger shall be fully computer tested and its charge voltage factory set to ± 1% tolerance. Chargers with fieldadjusted potentiometers are not acceptable. A pulse-type charger shall be employed to promote long battery life and reduce the potential for grid corrosion. The charger shall provide a continuous high charge to recharge the battery and when the battery is at full capacity, the charger will shut off. Periodically the charger shall provide a pulse of energy to keep the battery topped off. The charger shall be current limited, temperature compensated, short- circuit proof and reverse polarity protected. The unit shall be furnished with an electronic lockout circuit, which will connect the battery when the AC circuit is activated, and an electronic brownout circuit, which will activate the emergency lights when utility power dips below 75% of nominal voltage. A low voltage battery protection circuit shall be provided and will disconnect the battery from the fused output circuit at the end of discharge. The unit shall self-test for 1 minute every 30 days, 10 minutes every 6 months and 30 minutes every 12 months. The unit shall be capable of full recharge in compliance with a CSA specifications. The unit shall be furnished with a sealed dust tight relay, a test switch and seven diagnostic LED indicator lights to continuously monitor the status of the unit: Battery Failure, Battery Disconnected, Charger Failure, Lamp Failure, Service Alarm, AC "ON", Charger High Rate. The unit shall be T-bar mounted and come complete with tool-less emergency lighting heads requiring no tools to adjust or aim.

The unit shall be Emergi-Lite® model: ______.

Miniature LED battery unit

Features

- Fully adjustable LED glare-free lens
- 3.6V 2W long life LED light source
- 120/277/347VAC Input
- Automatic, temperature compensated, pulse type charger
- Low voltage disconnect prevents over discharge
- of battery
- Automatic brownout protection
- Sealed maintenance-free 3.6V nickel-cadmium battery offering 120 minutes of emergency lighting
- Battery lock-out prevents discharge during installation
- Red LED charger monitor
- Momentary test switch allows for quick operational check
- Injection-molded thermoplastic ABS housing
- Rear keyhole slots and universal knock-outs to mount to any standard 4" junction box
- Injection-molded thermoplastic ABS housing
- · Fast and easy installation with snap-together design
- Ceiling or wall mount installation
- · Suitable for damp locations
- Use in 5°C-30°C ambient temperature
- Meets CSA C22.2 no.141-15

ECB-HO Series

Commercial battery unit

Features

- Fully adjustable LED glare-free lens
- 5.4W long life high output LED light source
- Provides 90' spacing at 7.5' mounting height
- Dual voltage input capability 120/347VAC
- Automatic, temperature compensated, pulse type charger
- Low voltage disconnect prevents over discharge of battery
- Automatic brownout protection
- Sealed 9.6V-12W lithium-ion battery offering 90 minutes of emergency lighting
- Battery lock-out prevents discharge during installation
- Red LED charger monitor
- Momentary test switch allows for quick operational check
- Injection-molded thermoplastic ABS housing
- Rear keyhole slots and universal knock-outs to mount to any standard 4" junction box
- · Fast and easy installation with snap-together design
- · Ceiling or wall mount installation
- Comes standard with one (1) year warranty
- Meets or exceeds CSA C22.2 no.141-15
- Warranty details at: www.emergi-lite.ca

Typical specifications

The contractor will install the **Emergi-Lite® ECB-HO LED Series** battery unit.

The emergency lighting system shall consist of fully automatic equipment with two High output LED heads. Each unit shall contain a fully automatic, solid state charger with test switch and AC ON pilot lights.

The unit shall contain a sealed transfer circuit and low voltage disconnect circuit. The battery shall be 9.6V with a capacity of 12W for 90 minutes.

The unit shall be cUL approved to meet CSA 22.2 no. 141-15 standard. The unit shall be **Emergi-Lite®** model: ______.

Features

10-year life expectancy, maintenance-free emergency lighting units.

The **ESL Series** battery units combine long life expectancy, high-performance design and a reasonable initial cost outlay. Ideally suited for a range of commercial applications, the long-life lead acid battery is specifically recommended for environments where the unit will be exposed to large variances in ambient temperature.

- Rugged steel cabinet with corrosion-resistant undercoating
- Removable front panel on cabinet provides easy access and allows the unit to be mounted at ceiling height
- Solid-state pulse-type charger current-limited, temperature- compensated, short-circuit proof and reverse-polarity protected.
- Unit comes standard with electronic lockout and brownout circuits
- Sealed dust-proof transfer relay, test switch and LED indicator lights
- Long-life, maintenance-free lead acid battery
- NEXUS® compatible (for more information on NEXUS®, please consult your sales representative)
- CSA C22.2 No. 141 certified
- Standard 120/347 VAC input with line cord kit

Black

- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install a complete emergency lighting system as described herein and shown on the drawings.

The **Emergi-Lite® Smart Diagnostic** micro-controller board shall supply the rated load for a minimum of a 1/2 hour to 87.5% of the rated battery voltage. The unit shall be rated 120V or 347V, 60 Hz and be CSA listed. The unit shall have an output of: ______ V and _____ W.

The charger shall be fully computer tested and its charge voltage factory set to \pm 1% tolerance. Chargers with fieldadjusted potentiometers are not acceptable. A pulse-type charger shall be employed to promote long battery life and reduce the potential for grid corrosion. The charger shall provide a continuous high charge to recharge the battery, and when the battery is at full capacity, the charger will shut off.

Periodically the charger shall provide a pulse of energy to keep the battery topped off. The pulse charger shall be precisely regulated and shall charge the battery in relation to its temperature, state or charge and input voltage fluctuations. The charger shall be current limited, temperature compensated, short-circuit proof and reverse polarity protected.

The unit shall be furnished with an electronic lockout circuit. which will connect the battery when the AC circuit is activated, and an electronic brownout circuit, which will activate the emergency lights when utility power dips below 75% of nominal voltage. A low voltage battery protection circuit shall be provided and will disconnect the load when the battery reaches the end of discharge. The unit shall self- test for 1 minute every 30 days, 10 minutes every 6 months and 30 minutes every 12 months. The unit shall be capable of full recharge in compliance with CSA specifications. The unit shall be furnished with a sealed dust tight relay, a test switch and diagnostic LED indicator lights to continuously monitor the status of the unit: Battery Failure, Battery Disconnected, Charger Failure, Lamp Failure, Service Alarm, AC "ON", Charger High Rate. The emergency lighting heads shall require no tools for orientation.

The unit shall be Emergi-Lite® model: _

High-performance commercial battery unit

Features

BATTERY UNITS

Standard life expectancy, maintenance-free emergency lighting units.

The **ESL High Performance Series** battery units combine long life expectancy, high-performance design and a reasonable initial cost outlay. Ideally suited for a range of commercial applications that require high performance emergency lighting fixtures.

- Rugged steel cabinet with corrosion-resistant undercoating
- Removable front panel on cabinet provides easy access and allows the unit to be mounted at ceiling height
- Solid-state pulse-type charger current-limited, temperaturecompensated, short-circuit proof and reverse- polarity protected.
- Die cast aluminum high efficiency heads
- Innovative head design featuring four LEDs and a dual driver that provide even illumination even in case of unexpected component failure
- · Standard grey colour (black optional)
- May be wired from top or side only. Rear keyhole slots provided for installation (except for 24V model)
- Maintenance-free lead-acid battery
- Standard 120/347VAC input voltage
- Advanced diagnostics capabilities (specific load requirements)
- Meets exceeds CSA C22.2 No. 141-15
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the **Emergi-Lite® Distinction™ Series** battery units.

The battery unit will supply the rated load for a minimum of hour to 87.5% of the rated battery/voltage. The unit shall be rated 120 or 347V, 60 Hz and be CSA No.141 listed. The charger shall be fully computer tested and its charge voltage factory set to ± 1% tolerance. A pulse type charger shall be employed to promote long battery life and reduce the potential for grid corrosion. The charger shall provide continuous high charge to recharge the battery. When the battery is at full capacity the charger will shut off. The pulse charge shall be current limited and precisely regulated by an electronic circuit which samples the battery in relation to its temperature, state of charge and input voltage fluctuations. The charger shall be current limited, temperature compensated, short-circuit proof and reverse polarity protected.

The unit shall be furnished with an electronic lockout circuit, which will connect the battery when the AC circuit is activated, and an electronic brownout circuit, which will activate the emergency lights when utility power dips below 75% of nominal voltage.

A low voltage battery protection circuit will disconnect the battery at end of the discharge. The unit will come complete with the **Distinction™ Series** diagnostics micro-controller board option. The unit shall self- test for 1 minute every 30 days, 10 minutes on the 6th month and 30 minutes every 12 months. The unit shall be furnished with a sealed dust tight relay, a selectable test switch 1 minute, 5 minutes, 10 minutes or 20 minutes and diagnostics LED indicator lights to continuously monitor the status of the unit: battery failed, battery disconnect, charger failure, lamp failure, service alarm, AC "ON" and charger "ON".

Survive-All[™] NXM Series

NEMA-4X

Features

BATTERY UNITS

- Fully gasketed cast aluminum back plate with clear polycarbonate cover NEMA-4X certified
- Comes standard with non-audible advanced diagnostic, 15 minutes time delay and lamp disconnect
- Audible warning and time delay functions can be enabled or disabled during installation
- Micro-controller diagnostic system tests, detects and indicates battery, charger circuitry or LED lamp failures
- Non-intrusive magnetic test switch
- Long-life, maintenance-free sealed lead-acid battery
- 1/2" rigid conduit entry on top and back
- Can be installed on 4" junction boxes
- Comes standard with tamper-proof screws and bit
- Cold weather option -40°C (-40°F)
- NSF Certified for food processing plants
- Standard 120/347VAC input voltage
- Meets and exceeds CSA C22.2 No. 141-15 certified
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install the Emergi-Lite® NEMA-4X Certified Survive-All™ NXM Series battery unit. Specifically designed for high abuse areas, wet locations, and cold weather (CW option -40°C (-40°F)), the housing shall consist of a fully gasketed Die-Cast with a cast aluminum back plate and a clear heavy-duty UV resistant polycarbonate cover. The heads shall be fully adjustable without tools and the lamps shall be high efficiency MR16 LED. The standard unit shall be equipped with tamper-proof screws and bits.

The **Emergi-Lite®** Advanced Diagnostic micro-controller charger board shall supply the rated load for a minimum of 30 minutes to 87.5% of the rated battery voltage. The charger incorporates lockout and brownout circuits, and low voltage disconnection. It protects the unit from over-current, shortcircuit, and reverse polarity. The unit shall be rated 120/347V, 60Hz.

The unit shall have an output of ______ V. This unit shall self-test for 1 minute every 30 days, 10 minutes every 6 months and 30 minutes every 12 months. The unit shall be furnished with a non-intrusive magnetic test switch. A "Service Required" lamp shall be located near the test switch and flash when a fault is detected. A four-LED diagnostic display shall be located inside the equipment and shall identify the source of failure (battery, charger, circuitry, or lamps).

The unit shall be CSA 22.2 No. 141-15 certified

The equipment shall be Emergi-Lite® model: _

EHP Series NEMA-4X rated

Features

- Fiberglass grey housing with captive screws. It is designed for heavy- duty industrial applications: indoors, outdoors, hose-down areas, cold-storage facilities etc
- NEMA-4X protection grade against liquids and windblown dust
- High ambient temperature up to 50°C [122°F] and optional cold- weather -40°C to 50°C (-40°F to 122°F)
- High temperature lead-calcium battery
- High-efficacy LED emergency heads outperform traditional 50W halogen lamps
- Innovative head design: four-LED and dual-driver provide illumination even in case of unexpected component failure
- · Product features stainless steel exterior hardware
- Simple and easy to install on walls, poles, columns or struts. For vertical installation on poles or columns use mounting bracket catalogue number: PMK1-E (sold separately)
- May be wired from top or side (see drawing for position)
- Standard infrared **remote test** control included in all models: allows to test the equipment without the need to climb a ladder. Functional up to a distance of

30 ft. universal, one remote test control may test all units on the job.

nexus

- Optional audible and non-audible Auto-Diagnostic and auto-test
- Optional NEXUS® central monitoring system
- Meets or exceeds CSA C22.2 No. 141-15
- 1-year limited warranty
- Advanced diagnostics capabilities (specific load requirements)

Power consumption and unit rating

· Warranty details at: www.emergi-lite.ca

during variations of the battery discharge voltage. The equipment shall have a dual AC input rated 120/347VAC 60Hz and a charger module equipped with micro-controller and solid-state transfer relay. The charger shall perform

Typical specifications

functions like: AC brownout detection, battery lockout, low voltage battery disconnect, and provide protection against overcurrent, short-circuit, and DC reverse polarity.

Supply and install Emergi-Lite® EHP Series of battery unit equipment. The unit enclosure shall have a compressionmolded fiberglass construction and shall be equipped with a hinged, overlapping cover. The cover shall include a 3/16" wide rubber gasket and shall fasten with two stainless-steel captive screws. The enclosure shall have lateral flanges with holes for easy installation on the wall and also include two water-tight plugs of size 1/2" NPT for vertical and horizontal conduit and wire access. The emergency lighting heads shall

be installed at the bottom of the cabinet and have the

electrical cable passing through the swivel via water-tight

bushings. The heads shall be made of die-cast aluminum and

have a flat square lens made of UV-stabilized clear

polycarbonate. The lens shall be sealed with a rubber gasket

and be fixed with an aluminum frame and 6 (six) tamper-

proof screws. Each head shall include four (4) LEDS and two

independent LED drivers with electrical connections allowing

for lighting even in case of unexpected component failure.

Each head shall have an input voltage range of 12 – 24VDC and

a constant power regulation, providing stable illumination

Auto-Diagnostic option shall execute automatic tests for one minute every 30 days, 10 minutes every sixth month and 30 minutes every 12 months. In case of functional failure detection the equipment pilot light shall change color from green to red and signal a service alarm with specific flashing codes: battery or lamp disconnect, battery failure, charger failure, lamp failure. A label installed on the cover shall contain the legend with diagnostic codes. The equipment shall come standard with an infrared remote test control.

The equipment shall be rated NEMA-4X for hose down applications. The equipment shall be listed to cUL standards for damp and wet locations.

Certified to CSA C22.2 No.141-15.

Unit shall be **Emergi-Lite**[®] model:

Photometry performance

Whether installed indoors or outdoors, the EHP Series of LED emergency lights deliver a stable and consistent illumination on the path of egress for a wide range of mounting heights. Depending on the application, one may select and specify among three types of performance for the right power consumption, lumen output and cross reference to traditional incandescent emergency lights.

LED lamp	Power (W)	Total lumens	Outperforms the incandescent lamps
L6	6W	565	35W PAR36, MR16 halogen
L10	10W	1030	50W PAR36, MR16 halogen
L15	15W	1320	50W MR16-IR halogen

Industrial environment: wall mounted equipment, reflectances: 10/10/10; 6ft wide illumination path. 200 ft X 200 ft X 30 ft space. The illumination level meets all requirements of the NBC; Average: 1fc; Min: 0.1fc.

		Spacing centre-to-centre (feet

ESLNX Series

6, 12 and 24V NEMA-4X rated

Features

- Fully gasketed fiberglass reinforced polyester housing NEMA 4X
- Solid-state pulse-type charger current limited, temperature- compensated, short-circuit proof and reverse-polarity protected
- Unit comes standard with electronic lockout and brownout circuits
- Sealed dust-proof transfer relay, test switch and LED indicator lights
- Long-life, maintenance-free sealed lead acid battery
- Standard 120/347VAC input voltage
- NEXUS[®] compatible (for more information on NEXUS[®], please consult your sales representative)
- Certified CSA C22.2 No. 141-15
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Wire guards

Ordering code	Description
460.0034-E	Wall mount

Typical specifications

Supply and install the Emergi-Lite® NEMA-4X Rated ESLNX Series battery unit. The unit shall be specifically designed for high abuse areas and wet locations. The unit enclosure shall be of fiberglass-reinforced polyester and shall include a hinged door, fully gasketed and locked with two corrosionresistant screws. The emergency head(s) shall be installed at the bottom of the unit and/or at both sides and shall be covered by a UV-resistant polycarbonate cover. The bottom head shall include one or two lamps as specified. The unit shall come with two heads at the sides, each with one LED lamp. The lamps shall be high-efficiency, long-life LED type of: ______ V _____ W as specified. The lamp swivels shall be easily adjustable without tools. The unit enclosure shall include a test switch and a pilot light. The unit shall include sealed, maintenance-free lead-calcium batteries and an electronic module for the battery charger and other emergency lighting functions. The charger shall be computertested and its maximum charge voltage set in the factory with ± 1% tolerance.

A pulse-type charger shall be employed to promote long battery life and reduce the potential for grid corrosion. The charger shall provide a continuous high charge to recharge the battery and when the battery is at full capacity, the charger will shut off. Periodically the charger shall provide a pulse of energy to keep the battery topped off. The charger shall be current limited, temperature compensated and short-circuit proof. The unit shall be furnished with an electronic lockout circuit, which will connect the battery when the AC circuit is activated, and an electronic brownout circuit, which will activate the emergency lights when utility power dips below 75% of nominal voltage. A low voltage battery protection circuit shall be provided and will disconnect the battery from the fused output circuit at the end of discharge. When specified, the unit equipped with the Emergi-Lite® Auto-Diagnostic feature shall include a microcontroller based charger board that will generate an automatic test for 1 minute every 30 days, 10 minutes every six months and 30 minutes every 12 months.

The micro-controller circuitry shall ensure equipment readiness and reliability by continuously monitoring every critical function of the unit. If a component failure occurs, the pilot light located on the front of the unit will change color from green to red and will flash indicating a fault. A detailed diagnostic legend shall be available next to the pilot light and shall provide fault identification (battery, charger circuitry, lamps) for maintenance personnel. The unit shall be capable of full recharge in compliance with CSA specifications and supply the rated load for a minimum of a 1/2 hour to 87.5% of the rated battery voltage.

The unit shall be rated 120V or 347V, 60 Hz and shall have an output of: V W.

The unit shall be Emergi-Lite® model: _

HZM Series

Hazardous location battery unit

Features

- Certified Class I Zone 2, Groups IIA, IIB and IIC
- Certified Class I Division 2, Groups A, B, C and D as per CSA C22.2 No.137-M1981
- Certified temperature codes for several types of emergency lamps
- Suited for areas with the risk of flammable gases, vapors or liquids that can create an explosive atmosphere
- Certified CSA C22.2 No141
- Polymeric frame, with built-in gasket to prevent water infiltration
- Heavy-duty 1/8" thick aluminum back plate with keyholes for secure wall-mount installation
- Two LED lamps, shielded by a cast aluminum housing and a polycarbonate cover
- Sealed, maintenance-free, lead-calcium batteries with up to 120W emergency power
- Built-in microcontroller-based battery charger and autodiagnostics circuitry
- 1/2" electrical conduit entry on both sides and at the top
- NEXUS[®] compatible (for more information on NEXUS[®], please contact your sales representative)
- Advanced diagnostics capabilities (specific load requirements)
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install **Emergi-Lite® HZM Series** battery units. Designed specifically for Hazardous Location environments, the equipment frame shall be of industrial grade polymeric material with gaskets around both sides of the contour. The frame shall be fixed between two plates made of 1/8" thick aluminum sheet. The back plate shall include four keyholes for wall-mount installation. The front plate shall include two water-tight lenses for pilot lights: AC-on and "Service required". When specified, the equipment shall have attached a lower compartment containing two emergency lights with adjustable swivels and LED lamps. The lamps shall be shielded by a cast aluminum housing and protected by a shockabsorbent, transparent polycarbonate cover.

The equipment shall be certified for hazardous locations: Class I Division 2 Groups A, B, C and D. The standard equipment shall have a dual voltage input: 120/347VAC and shall be equipped with a magnetic test switch located on the left side of the frame.

The unit shall include self-testing/self-diagnostic functions monitored by a micro-controller and shall automatically self test for one minute every 30 days, 10 minutes every 6 months and 30 minutes annually. The "Service required" LED shall light when a fault is detected. A four-LED diagnostic display located inside the equipment shall identify the source of the failure (battery, charger circuitry, lamp load).

The unit shall be listed CSA C22.2 No.141 and No. 137 – M1984 The battery unit shall be **Emergi-Lite®** model: ______.

IPE-LEDN Series

IP65 linear LED fixture

Features

• IP65 rated

BATTERY UNITS

- Polycarbonate lens and thermoplastic enclosure, vandal resistant and UV stabilized
- Stainless steel hardware
- Ceiling, surface or pendant mounting
- Low profile, less than 4 inch deep
- 0-10V dimming standard on all models
- 120VAC to 277VAC universal, 347VAC optional
- Certified for wet and damp locations
- Expected life of 50 000 hours (L70)
- Power factor > 0.90
- ROHS compliant
- Meets IEEE C.62.41-1991 input transient protection
- Available integral motion sensor
- · Optional emergency driver
- 5-year limited warranty
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install **Emergi-Lite® IPE-LEDN Series** linear LED fixtures as specified. The luminaire shall operate in 120-277VAC or 347VAC and use a high efficiency electronic driver. The lens shall be constructed of UV- stabilized industrial grade vandal-resistant polycarbonate and the enclosure of thermoplastic. A durable formed gasket shall be provided between the enclosure and the lens and shall be designed specifically for hostile environments. A metal plate used to retain the reflector also serves to dissipate heat, therefore lengthening driver life.

The fixture shall be **Emergi-Lite**® model: _____

Glossary

A	Ammeter	Used to measure the current being supplied to the battery while in charge mode.	
U	Auto-Diagnostics	Automatically tests and continuously monitors your emergency lighting unit. If a problem occurs, the unit will send a visual (flashing or blinking LED indicator) and audible warning. Complies with Fire Code requirements.	
UN	Auto-Diagnostics, non-audible	Automatically tests and continuously monitors your emergency lighting unit. If a problem occurs, the unit will send a visual (flashing or blinking LED indicator) warning. Complies with Fire Code requirements.	
СТ	Cab-tire	Unit supplied with a cab-tire cable used for special hardwire applications.	
CW1	Cold weather, 120VAC	120VAC input cold weather protection feature for applications where temperatures can reach -40° C.	
CW3	Cold weather, 347VAC	347 VAC input cold weather protection feature for applications where temperatures can reach -40 $^{\circ}$ C.	
н	Heater & thermostat	Like a heat blanket, used to keep internal temperature optimal for battery units that are installed in cold environments.	
L	Line cord (120V)	When ordering a battery unit with the LC option, we supply and pre-install a line cord with a standard 3 prong 120V plug. Just hang the fixture and plug it in to a standard receptacle! Only available on 120V units.	
т	Lamp disconnect	To disconnect the emergency lighting load in an area that is not in use during a prolonged power failure or while the area is no longer being occupied.	
Ρ	Light activated test switch	Used to remotely test battery units by pointing a flashlight at a photocell mounted on the bottom of a battery unit.	
NEX	NEXUS® system interface	The NEXUS® system interface is a computerized maintenance system for emergency lighting that once programmed, will perform the tests, keep written records and send notification if anything to be fixed. One full system can address hundreds of units in as many buildings as you need from single location.	
NEXRF	NEXUS® wireless system interface	The NEXUS® wireless system interface is a computerized maintenance system for emergency lighting that, once programmed, will perform the tests, keep written records and send notification if anything needs to be fixed. One full system can address hundreds of units in as many buildings as you need from a single location.	
D3	15 minutes time delay	Normally, when the A.C. is restored, all emergency lighting lamps are turned off. However, in some such as when metal halide lamps are used, it is possible that the general lighting will not be availab several minutes after the blackout (or brownout) period. Battery units with the T3 option will keep energy in store to ensure that the emergency lighting stays on or comes back on for at least 15 mir once the regular A.C. power has been restored.	
ТР	Tamper-proof screws	Screws that require a special bit. Can be used on certain units to deny access to unauthorized personnel.	
LW	Twistlock plug	Used to facilitate the connection and removal of battery units for maintenance purposes.	
TBACDC	AC/DC terminal block	Used to facilitate the connection of large gauge input cables.	
ТВ	DC terminal block	Used to facilitate the connection of large gauge D.C. input cables.	
ТВАС	AC terminal block	Used to facilitate the connection of large gauge A.C. input cables.	
v	Voltmeter	Indicates voltage being supplied to the battery when in charge mode.	
CPS3	Constant power supply	Supplies 24 VDC-3 amp output for exit signs, fire doors, automatic lock, etc.	
RFI	Radio frequency interference	The radio frequence interrupter protects equipments from external radio frequence interference.	
ZCB	Voltage sensing relays	Voltage sensing relays pre-used to detect the loss of lighting in a specific area and activate the emergency lighting.

Remote heads overview

Emergency lighting heads represent a key element of an emergency lighting system performance. During a power failure, these lamp heads must provide adequate lighting levels for safe evacuation. The emergency power supply is provided to the heads from batteries. Equipment manufacturers and customers should use high intensity light sources, with efficient light levels and distributions.

MR16 LED

We offer a complete series of MR16 LED lamps available for all standard battery voltages: 6V, 12V, 24V and 12OV. With up to 30,000 hours of operational life and a luminous flux of typically ranging from 200 up to 590 lumens, these LED lamps are available with most emergency heads designed to hold MR16 lamps and meet most illumination specifications. For example, one pair of LED emergency heads installed at a height of 7.5ft, could illuminate a 6ft path of egress during an emergency by using 75% less power. Consequently, the use of smaller battery capacity units and fewer fixtures due to superior illumination, means reducing the amount of electrical wiring and your environmental footprint.

MR16 LED lamps

Application	Voltage (V)	Wattage (W)	Average life (Hrs)	Lumen	Efficacy (LM/W)
Emergency lighting	6	4	30,000	199	49.8
Emergency lighting	12	4	30,000	220	55.0
Emergency lighting	24	4	30,000	220	55.0
Emergency lighting	120	5	30,000	204	51.0
Emergency lighting	12	6	30,000	340	68.0
Emergency lighting	12	6	30,000	540	90.0
Emergency lighting	24	6	30,000	590	98.3

ERAUR Series

Remote recessed architectural fixture

Features

REMOTE FIXTURES

- Recessed installation in T-bar suspended ceiling and easily spring mounted in Gyproc ceiling
- All-metal backbox enclosure
- Housing rated for plenum or insulated ceilings (IC)
- Thermoplastic rectangular fixture with additional round trim-plate, white finish
- Black thermoplastic decorative trim-plates
- Two-wire universal input
- Fixed optics, optimized light distribution for ceiling heights of eight to 12 ft
- Fixed, square distribution pattern
- Four high-intensity LED sources with redundant connections; CCT 5000K
- Listed NSF, splash non-food zones
- Certified cUL to CSA 22.2 No.141-15
- Warranty details at: www.emergi-lite.ca

Suggested specifications

Supply and install the **ERAUR Series** of recessed emergency lighting unit from **Emergi-Lite®**. The unit construction shall include an all-metal housing and a thermoplastic rectangular trim-plate with a detachable circular trim ring for choice of aesthetics. The optics shall be an impact-resistant polycarbonate lens with fixed light distribution, optimized for ceilings of 8 to 12-ft height. The housing shall include an isolated compartment for electrical connections and a detachable cover with knockouts for electrical supplies. The unit shall include a hardware kit for installation in T-bar suspended ceilings.

The emergency lights shall be four high-intensity LED with operational life of minimum 36,000 hours, until 70% of the initial light level (reported L70). The LEDs shall have redundant interconnections: eventual failure of one of them shall allow others to function.

The unit shall be cUL certified to CSA 22.2 No.141-15 The unit shall be **Emergi-Lite®** model:

Power consumption and unit rating

Input (VAC)	Input current (A)	Input power (W)	Power factor
120	0.060		
240	0.030	7.0	0.95
277	0.025		

Input voltage (VDC)	Input power (W)
1	DC
6-24	6.5

Photometry performance

The **ERA Series** has a fixed lighting distribution, optimized by design for ceiling heights up to 12 ft. Along an office corridor the space coverage ranges from 68 to 80 feet. The square distribution pattern option covers a surface of more than 700 square feet.

Table A: Standard unit 6-ft wide corridor ¹			
Mounting height	Spacing centre-to-centre		
9 ft	68 ft		
10 ft	80 ft		
12 ft	72 ft		

Table B: Option "square distribution pattern" – single unit coverage1				
Mounting height	Room size	Room surface		
10 ft	27 ft x 27 ft	729 square feet		

¹Typical reflectance levels of walls/ceiling/floor: 80/50/20

Vandal resistant linear remote fixture

Features

- Easily adjustable LED strips for multiple beam angles
- 1200-1300 lumen output
- White high impact thermoplastic housing
- Frosted lens
- Impact tested to meet IK10¹
- Standard surface ceiling and wall mount
- Optional accessory: semi-recessed ceiling mount
- Compatible with Emergi-Lite® 12 and 24 volt battery units
- Universal voltage 120V through 347V 60Hz, 12-24VDC
- Rated for -20°C to 45°C
- Suitable for wet locations
- Meets IP65 rating
- ROHS compliant
- cUL approved to CSA C22.2 No, 141-15
- Warranty details at: www.emergi-lite.ca

¹IK ratings refer to impact tests. IK10= Protected against 20 joules of impact (equivalent to 5KG of mass dropped from 40cm high)

Lux-Ray[™] LED Series

Remote fixture rugged, versatile, sophisticated

Features

- Four-LED light engine with redundant connections
- Powder-coated die-cast aluminum construction
- Clear polycarbonate lens allows for maximum lumen
 output
- Surface wall mount
- Certified to the CSA 22.2 No.141-15 standard
- NEMA-3R damp and wet locations
- Operating temperature -40°C to + 50°C

Options

- Forward-throw light distribution
- Dual-mode: normal and emergency LED lighting
- High-lumen output
- · Photo-switch: dusk-to-dawn control of normal lighting
- Infrared remote control (normal lighting)
- Warranty details at: www.emergi-lite.ca

Retract-a-Lite[™] Series

Remote fixture

Features

Dimensions

- Remote only visible upon power failure
- Front can be painted or wallpapered on-site to match existing decor
- Fully automatic operation: The unit door opens upon supply with DC voltage from battery and closes after voltage disconnect.Time delay option required on battery unit to properly close the door
- AC line voltage not required
- Emergency lights: Two high efficacy LED lamps
- Certification: CSA C22.2 No.141
- · Warranty details at: www.emergi-lite.ca

Dimensions are approximate and subject to change.

Typical specifications

Supply and install **Emergi-Lite® Retract-a-Lite™ Series** of remote fixture: The unit shall be designed to be concealed in walls or ceilings with a cavity. The unit equipment shall be completely concealed in the wall or ceiling in the absence of remote power. Upon DC power supply the unit will rotate its door by 180° to expose the emergency lamps, and power them. After the DC power disconnect the lamps will turn off and the unit will conceal the heads by rotating the door by 180°.

The DC-remote unit shall not require the presence of AC power in order to open or close the door.

Under normal conditions, the only visible parts of the unit shall be the off-white flat door and trim plate that can be customized on site with paint or other suitable wall covering. The light source shall be LED lamps of specified wattage and light output.

The remote unit shall be the Emergi-Lite® model: ____

Mini Retract-a-Lite[™] Series

For AC power generator

Features

- Easy to retrofit in finished walls: the unit slides in through an 8.25" by 5.75" hole
- No back-box needed to pre-install
- Output: 12VDC with up to 100W of power
- Direct connection to 120 or 347VAC power generators
- Emergency lights: MR16 LED lamps
- Certification: CSA C22.2 No. 141
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install Emergi-Lite[®] Mini Retract-a-Lite[™] Series. The unit shall be designed to be completely concealed in walls with a cavity. The equipment shall consist of a metal housing containing two modules joined by a flexible bracket and electric conduit. One module contains the power transformer and electrical connection box; the other module contains the emergency lights installed on the back of a door able to rotate several turns of 360°. The unit equipment shall be completely concealed in the wall, after the installation through a rectangular opening not larger than 8.25" by 5.75". In stand-by mode, the only visible parts of the unit shall be the off-white flat door and trim plate that can be customized on site with paint or other suitable wall covering. Upon AC power supply the unit will expose the emergency heads by rotating its door 180° and then will power the lamps. At the end of the AC power, the lamps will turn off and the unit will retract the heads by rotating the door 180° in the same direction.

The unit shall not require the presence of AC power in order to close the door and conceal the lights. The door of the unit shall be easy to force-turn (open or close) by hand. The light source shall be 12V MR16 LED lamps of specified wattage and light output.

The remote unit shall be **Emergi-Lite®** model: ______.

Features

- Fire-retardant thermoplastic
- 300° rotation
- CSA certified to C22.2 No. 141
- 6, 12 and 24V with various wattages
- Warranty details at: www.emergi-lite.ca

Dimensions

Dimensions are approximate and subject to change.

Typical specifications

Lamp head and stem shall be injection molded, impact resistant, flame retardant thermoplastic and shall require no tool for aiming or adjustment. The lens shall be inverse concave design and fully adjustable for aisle or area distribution during installation without the need to energize the lamp. Visual identification of distribution shall be provided through position of adjustment pins.

Fixture shall be supplied with a canopy for installation on any four inch octagon box. Housing shall be designed to allow for lamp replacement if required.

The remote unit shall be the Emergi-Lite® model: _____

Survive-All[™] EF39 & EF39P Series

NEMA-4X certified remote fixture

Features

- Fully gasketed with a selection of cast aluminum or polycarbonate back plate
- Clear polycarbonate UV and impact resistant lens
- Choice of single or double lamp models
- Available in 6, 12 and 24V models LED
- Easy lamp replacement
- · Comes standard with tamper-proof screws and bit
- NSF certified for food processing plants
- NEMA-4X certified¹
- CSA certified to C22.2 No. 141-15
- Suitable for indoor/outdoor installation
- Warranty details at: www.emergi-lite.ca

¹For EF39P, units are NEMA-4X certified when installed using a circular NEMA-4X rated junction box (sold separately by ABB under P/N CE365D-CAR or CE365DW-CAR and with plugs P/N P7701W-CAR

Dimensions

Typical specifications

Supply and install **Emergi-Lite® EF39P Series** remote emergency lighting fixtures. These remote fixtures will consist of either single or double lamp configurations according to the design. These fixtures shall be fully gasketed with a UV resistant and fire retardant polycarbonate back plate with a clear heavy-duty UV resistant polycarbonate lens. The unit shall be equipped with two emergency heads with tool-less adjustable swivels (lamps of 12W or less). Units shall be NEMA-4X and NSF certified and specifically designed for high abuse areas, wet and cold weather locations, food processing plants, as well in applications requiring a resistance to corrosive agents. The standard unit will come with stainless steel tamper-proof screws and bit.

The remote fixture shall be certified to CSA C22.2 No. 141. The head(s) shall be fully adjustable without tools and should be equipped with LED lamp(s) of _____ V, ____ W.

The remote unit shall be the Emergi-Lite® model: _____

EHPRL Series

NEMA-4X rated remote fixture

Features

- PVC grey housing and heads designed for heavy-duty industrial applications: indoors, outdoors, hose-down areas, cold-storage facilities etc
- Can be installed in wide temperature conditions: -40°C to 55°C (77°F to 131°F)
- NEMA-4X protection grade against liquids and windblown dust
- High-efficacy LED emergency heads outperform traditional 50W incandescent lamps
- Innovative head design: four-LED and dual-driver provide illumination even in case of unexpected component failure
- Simple and easy to install on walls, poles, columns or struts. For vertical installation on poles or columns, use mounting bracket catalogue number: PMK1-E (sold separately)
- Meets or exceeds CSA C22.2 No. 141-15
- 1 year limited warranty
- Warranty details at: www.emergi-lite.ca

Typical specifications

Supply and install **Emergi-lite® EHPRL Series** remote emergency lighting fixtures. These remote fixtures will consist of either single or double lamp configurations. The housing shall be made of grey PVC designed for heavy duty industrial applications with temperatures ranging from -40°C to 55°C [-40°F to 131°F]. The remote fixture can easily be installed on walls, poles, columns or struts. The heads shall be die-cast and have a flat square lens made of UV stabilized clear polycarbonate. Each head shall include four (4) high efficacy LED and two independent drivers.

The remote fixture shall fully adjustable without tools, be NEMA-4X rated and be cUL listed to CSA C22.2 No.141-15.

The remote unit shall be **Emergi-Lite**® model: _____

Mini-Inverter Series

Interruptible unit equipment

Features

The **Mini-Inverter** is a cUL Listed stand-alone pure sine wave output inverter designed to provide power to designated emergency lighting fixtures. In a power loss situation, it will supply power from the onboard battery supply. The **Mini-Inverter** works in conjunction with incandescent, LED, and fluorescent fixture types and will automatically run switched, normally-on, or normally-off designated emergency fixtures. The **Mini-Inverter** is ideal for applications requiring an emergency source for lighting arrangements that utilize multiple lamp and fixture types and is available in surface mount and comes with a one-year warranty and nine-year pro-rata battery warranty.

- Lamps operated: Incandescent LED, fluorescent lamps and ballast combinations, including TRIAC dimmable ballasts
- Components: High-efficiency pure sine wave inverter
- Temperature-compensated charger 12V oversized Valve Regulated lead acid (VRLA) battery
- Construction: 18-gauge steel for 300W & 600W/ 14-gauge steel for 1000W & 1440W with a white baked-on powder coat paint finish
- Emergency lighting supplied from one convenient, reliable source
- Input/output voltage 120/120V 60Hz or 347/347V 60 Hz
- Replaceable output fuse protection
- Valve regulated lead acid (VRLA) battery provides long-life and is maintenance free
- Line voltage allows for remote mounting of emergency fixtures at distances up to 1000 feet
- Low battery voltage disconnect
- Unit comes standard with electronic lockout and brownout circuits
- Meets or exceeds all National Electrical Code and Life Safety Code Emergency Lighting Requirements
 Cabinet in factory white powder-coat paint finish
- Cabinet in factory while powder-coat paint finish
- May accept load to 80% capacity when load feature power factor of 0.9 or more
- Non audible auto-diagnostic is standard. Nexus® system interface availbale with an improved minimum lost load detection of 10%.
- Standard lighting control override for 0-10V dimming systems
- Meets or exceeds the requirements of CSA 141-15

Typical specifications

Emergency lighting shall be provided by inverter unit equipment designed to operate designated incandescent, fluorescent and LED fixtures on emergency power at their full nominal lumen rating during the full 30 minute emergency discharge cycle. System output will be rated at watts for 30 minutes and provide fused output connections to the load. The system's voltage rating shall be VAC input/output nominal. The inverter unit shall allow for fused connected emergency fixture(s) to be normally on, normally off, switched or dimmed without affecting lamp operation during a power failure.

Upon utility power loss, the inverter unit shall deliver 100% of its rated output to the emergency fixtures regardless of the local switch or dimmer (TRIAC) position, and will provide power to emergency fixtures at distances of up to 1000 feet. The housing shall be manufactured using 18-gauge steel for 300W & 600W/ 14-gauge steel for 1000W & 1440W with a white baked-on powder coat paint finish. The unit's electronics shall include a self-contained inverter section with a fully automatic, thermalcompensating variable-rate battery charger, AC lockout feature, low battery voltage disconnect, overload, short circuit and brownout protection as standard. The unit shall utilize a sealed lead acid battery with a 10-year design life. The inverter system shall be cUL Listed and labeled. The unit shall be covered under a 1-year warranty on the electronics and battery and a 9-year pro-rata warranty on the battery. It shall meet or exceed the requirements of CSA 141-15.

Specifications

Transfer time: less than 1 second	
Voltage regulation on emergency: + 3%	
Frequency regulation on emergency: 60 Hz +/- 1%	
Load power factor range: 0.9 leading to 0.9 lagging	
Operating temperature: 20° to 30°C (68° to 86°F)	

Warranty

All **Emergi-Lite**[®] inverter products receive 100% quality inspection before shipment to insure proper and satisfactory operation. When operated under normal conditions, **Emergi-Lite**[®] inverter products will provide years of dependable service. This unit is backed by a complete 1-year warranty against defects in material or workmanship, and a 9-year prorata battery warranty.

Warranty details at: www.emergi-lite.ca

The inverter unit is Emergi-Lite® model: _

What are Emex Central Systems? An overview

Choosing the right system: There are a variety of ways in which back-up power can be provided. However, even though certain methods are suitable for critical applications, they may not necessarily be suitable for emergency lighting.

This is because an emergency lighting system has unique load characteristics. And since emergency lighting is a critical life-safety installation, it is vital that a central battery system is designed with these load characteristics in mind. EMEX Power central inverter systems are specifically designed to provide emergency power for emergency lighting systems in a power failure.

In choosing the right AC system to support emergency lighting it is important to consider the following questions:

Overload performance

Is the system able to start the full load without the mains supply present. How does the system perform in a total power failure (ie is the system able to start the load without the bypass supply being available)?

Repeat duty

CSA141-10 requires a central battery system to fully recharge within 24 hours. Is the charger able to recharge the batteries quickly (80% in 14 hours or 100% after 24 hours)?

Energy consumption and heat dissipation

Are the inverter and charger permanently running, shortening the battery life, generating heat, wasting energy and shortening component life? Are cooling fans running continuously, generating noise?

Maintenance

Is the system easy to service and maintain? Is the system designed in a modular format, or would the failure of even a minor component require the whole system to be shut down and stripped for repair?

General information on UPS systems:

Recharge period

UPS systems which are designed primarily for computer back-up generally offer short run times, 5 or 10 minutes. The long run times required for emergency lighting call for more powerful chargers to recharge the larger bank of batteries needed in the time prescribed by CSA.

Overload performance

An emergency lighting load will impose large "in-rush" currents when starting lamps from cold. However, UPS systems are often designed to shut down at only 125% overload and revert to the incoming supply. During a total power failure situation, this could result in total failure of the emergency lighting system. Furthermore, a UPS may fail to clear a breaker on a lighting circuit, meaning that a single short circuit fault could result in loss of the entire emergency lighting supply.

Energy consumption and battery life

Most UPS systems operate in the "on-line" mode, whereby the inverter runs constantly to supply the load, and power is taken from the battery with the charger running constantly. This places an excessive ripple on the battery (contrary to the advice given by most battery manufacturers). Also, the system is constantly generating heat which has a further detrimental effect on battery life. There are energy costs and heat generation issues must be addressed when running an on-line system.

System design and series highlights

The EMEX Power inverter and charger modules utilize solid state electronics of the highest reliability to provide a rugged, easy to maintain system with exceptional performance for emergency lighting use. The system has been designed solely for emergency lighting, and not modified from other less essential power supply requirements. As such, the system has exceptional overload performance without the need to over-specify the rating of the inverter to ensure faults can be cleared.

Each module has input and output protection and each module measures and limits its own current.

Alarms and status indications are provided on the front panel display, which provide clear and concise information, rather than a long list of parameters, which may be confusing.

Performance

The EMEX-Power Systems work with lighting loads to provide full light output for minimum 30 min. It is designed to support incandescent, fluorescent and LED loads. It will power these loads at cold starts for all normally off circuits or normally on circuits.

True Sine Waveform

Using a solid-state, pulse width modulation (PWM) inverter, the systems produce pure sinusoidal output waveform with less than 5% Total Harmonic Distortion (THD) for linear loads.

Reliability

The product is third generation inverter technology. LVD (Low Voltage Disconnect) circuitry eliminates excessive battery drain after long power outages.

Batteries

Automatic restart and recharge upon restoration of utility.

Approvals

- CSA C22.2 No. 141-15 Emergency Lighting Equipment
- CSA C22.2 No. 107.3 Uninterruptible Power Systems
- UL 1778 Uninterruptible Power Systems

Applications

EMEX-Power Systems can be used in almost every type of building, especially in architecturally sensitive applications or when maintenance costs and testing of individual unit equipment becomes significant. Our systems are designed to work with power factor corrected as well as the most recent T5 and T5-HO electronic ballasts.

Features	Benefits
Self-diagnostic/self-testing Programmable monthly and annual self-testing. Proven self-diagnostic with information stored in separate memory logs for Test, Event and Alarm. Microprocessor monitoring and control.	Compliance with NFPA101 The self-testing meets the requirements of NFPA and UL. User programmable time of testing. Test results, events or alarms can be downloaded from history logs. Load monitoring. Reduced testing/ service time.
Low heat dissipation Very low heat loss in standby operating mode (see specifications for exact values). Convection cooling in normal mode with forced air during emergency and recharge mode. Battery cabinets: convection cooling only.	Less air-conditioning Reduced costs for air-conditioning required to ensure the optimum operating temperature when compared with equivalent systems that dissipate much more heat. Higher reliability of fans and electronic components.
Versatile installation Modular design, easy front access freestanding cabinets, fasten together when more than one cabinet is required. Optional seismic kit available. All wiring provided is pre-cut and terminated, along with the necessary hardware for proper installation	Easy to install Quick installation and connection through flexible cable entries and fast access terminal blocks. Low MTTR (<30 min.) due to modular design, quick disconnect means and frontal access.
Complete protection Battery circuit breakers are standard. Modular standard systems offer overload capacity, short-circuit protection, current- limiting, low-battery disconnect and brownout protection as standard.	Reduced damage risks The full protection of the system will eliminate damage created by external events and will increase lifetime of the electronics and the batteries.
Thermal performance Bonded oversized heat sinks for maximum thermal performance. Cooling fans are energized only in inverter and recharge modes.	Increased MTBF Increased reliability and reduced preventative maintenance. No air filters needed.
Monitoring and control User friendly programmable interface with LCD display provides full metering values, easy program and control functions and a wide range of visual and audible alarms.	Wasy maintenance Diagnostics, troubleshooting, preventative maintenance and service are made easier by using the front panel display or the history logs.

IPS Single Phase Series

Interruptible emergency lighting inverter system 3KVA –15KVA

Features

- PWM/Power Mosfet technology
- Self-testing/self-diagnostic
- User programmable with password protection
- User programmable variable time delay
- Optional 100% normally Off output
- RS485 MODBUS RTU communication port
- Micro-processor controlled
- 30, 60, 90, 120 minutes run times
- Summary alarm form C dry contact
- Generator compatibility
- Electronic and magnetic ballast compatible
- Automatic event, test and alarm log
- LCD display
- Maintenance free standard batteries
- Forced air cooling during emergency and recharge mode only
- Off when on standby

⁽¹⁾Max. 3 months at 77°F-86°F (25°C-30°C)

Single line diagram

Cabinets

Modular design, freestanding NEMA type 1 steel cabinets powder coated for corrosion and scratch resistance. Front access design through hinged lockable doors requires only 42" front, 2" back and side clearance and 12" top clearance without drip shield. Top conduit entry Gland Plate.

Inverter

Using Power Mosfet/PWM technology the inverter converts DC voltage supplied by the batteries to AC voltage of a precise stabilized amplitude and frequency, suitable for most sophisticated electrical equipment. True sinusoidal output waveform with very low distortion (less than 5% for linear loads). Overload capability of 120% continuous, 150% for 1 minute and 200% for 10 seconds.

Charger

Fully automatic, temperature compensated, charger recharges fully discharged batteries in maximum 24 hours at nominal AC input voltage. AC input current limiting and over-voltage protection included.

Battery

System is provided standard with 10 year, maintenance free, sealed valve regulated, lead calcium batteries. 30, 60, 90 & 120 min. standard discharge time at full load under normal operating temperature (20°C to 25°C). Low voltage disconnect protection included. No special ventilation required.

Supervision

Automatic self tests consist of a 2-minute monthly, 1/3 discharge at 6 months and full annual discharge. The frontmounted control panel includes, a 4-line 20-character LCD display with a keypad to control and monitor the operation of the system. This allows the operator to easily "watch" system functions as they occur and check on virtually any aspect of the system's operation. Standard RS485 MODBUS RTU diagnostic interface.

Alarms

Battery High/Low, Low Voltage Disconnect, Battery Disconnect, Maintained Lamp Off, Charger Fail, Supply From Battery, System Inhibit, Circuit Breaker Trip, Module Breaker Trip, Inverter Undervoltage, Inverter Overvoltage, Output Overcurrent, Hi Temp, Over Temp, Unit in Bypass, Inverter Frequency Control Failed, Processor Reset.

Optional features

External Output Circuit Breakers, Output Trip Alarms, Extended Battery Warranty, 12 Hours Fast Recharge, External Maintenance Bypass Switch, Remote Meter Panel, Ethernet Port, Nexus® System Interface. Dripshield, Remote Alarm Panel, Normally Off Output, Anchor Mounting Kit, Dry Contact Relay, Bacnet Gateway.

Factory start-up

Includes one additional year of warranty. See warranty conditions.

Warranty

(Full limited warranty conditions available upon request)

Limited manufacturer warranty is one-year, parts and labor, for system electronics. Battery warranty is one year full plus 9 years pro-rata for a total of 10 years, under normal operating conditions. System must be put in service within 6 months from ship date in order to validate warranty. Consult factory for other battery types.

IPS Three Phase Series

Interruptible emergency lighting inverter system 4.5KVA –54KVA

Features

- PWM/Power Mosfet technology
- Self-testing/self-diagnostic
- User programmable with password protection
- User programmable variable time delay
- Optional 100% normally Off output

System is provided standard with 10 year, maintenance free, sealed valve regulated, lead calcium batteries. 30, 60, 90 & 120 min. standard discharge time at full load under normal operating temperature (20°C to 25°C). Low Voltage Disconnect protection included. No special ventilation required.

Supervision

Automatic self tests consist of a 2-minute monthly, 1/3 discharge at 6 months and full annual discharge.The frontmounted control panel includes, a 4-line 20-character LCD display with keypad to control and monitor the operation of the system. This allows the operator to easily "watch" system functions as they occur and check on virtually any aspect of the system's operation. Standard RS485 MODBUS RTU diagnostic interface.

Alarms

Battery High/Low, Low Voltage Disconnect, Battery Disconnect, Maintained Lamp Off, Charger Fail, Supply From Battery, System Inhibit, Circuit Breaker Trip, Module Breaker Trip, Inverter Undervoltage, Inverter Overvoltage, Output Overcurrent, Hi Temp, Over Temp, Unit in Bypass, Inverter Frequency Control Failed, Processor Reset.

Optional features

External Output Circuit Breakers, Output Trip Alarms, Extended Battery Warranty, 12 Hours Fast Recharge, External Maintenance Bypass Switch, Remote Meter Panel, Ethernet Port, NEXUS® System Interface. Dripshield, Remote Alarm Panel, Normally Off Output, Anchor Mounting Brackets, Dry Contact Relay, Bacnet Gateway.

Factory start-up

Includes one additional year of warranty. See warranty conditions.

Warranty

(Full limited warranty conditions available upon request)

Limited manufacturer warranty is one-year, parts and labor, for system electronics. Battery warranty is one year full plus 9 years pro-rata for a total of 10 years, under normal operating conditions. System must be put in service within 6 months from ship date in order to validate warranty. Consult factory for other battery types.

System Options

Details

(-A) 12 hour fast recharge

Battery charger upgrade option which decreases the time required to recharge a fully discharged battery to a fully charged state. The normal 24 hour recharge time is reduced to a 12 hour period.

(-C) Remote summary alarm panel

Wall mountable box provides visual and audible alarms with silence switch. The panel consists of LED indicators and built in audible alarm and may be located up to 1,000 feet away from the inverter system.

(-E) Output trip alarm

System triggers an alarm when any output breaker trips.

(-G) Inverter on dry contacts

Form C dry contacts that will change state when the system transfers to battery.

(-H) Normally off output

This output circuit is dedicated for the emergency only equipment. Emergency only equipment operates during power outages and when the system is on battery back up. This option leaves the normally off load circuits off during normal utility power conditions.

(-I) Extended battery warranty

Extends battery warranty from 10 years pro-rated to 20 years pro-rated.

(-J) External maintenance bypass switch

The external maintenance bypass switch is mounted in a maximum of 42"H x 36"W x 12"D NEMA 1 separate enclosure, used to completely isolate the inverter system from the connected load and AC utility input. This option allows the system to be safely powered down for maintenance or service.

(-K) Anchor mounting kit

The anchor mounting kit option is designed to prevent system movement. Heavy duty brackets are provided to secure system cabinetry to your surfaces.

(-L) Drip shield

Hood cover to protect the enclosure against falling water from sprinkler systems.

(-M) Second output terminal block

The output of the Central System is divided into two. The load can be connected to either outputs.

(-N) Normally on & normally off outputs

The Central System can have both normally on and normally off outputs. Either output can handle 100% of the load.

(-O) Bacnet Gateway

Allows communication with Bacnet network.

System testing

EMEX Central Battery Systems provide manual and automatic test functions. Manual test can be activated any time using the test key provided on the control panel. Manual testing will do a programmable fixed test time and can be aborted any time by pushing again on the test key. Automatic test and diagnostic is done following an annual sequence. Every month a quick diagnostic test of 2 minutes is performed. At the 6 month mark, a 1/3 timed discharge test is done, and at the 12 month, a full discharge, down to LVD is performed. Pass/Fail and discharge time are registered in the event log. Test time and date is programmed using the Service Menu.

Central System Request Data

1) Input voltage

EZ2™ Canopy

Quick & easy installation

Dimensions

Dimensions are approximate and subject to change.

Installation

Attach the backplate to the junction box, clip the canopy on the exit sign
 Hang the canopy on the back plate, make your connections using both hands
 Slide the unit in place, one screw and the job is done!

Typical specifications

The **EZ2TM Canopy** allows the installer to make all of the electrical connections using both hands without having to juggle with the exit sign, making it our most contractor friendly product feature to date.

Simply attach the backplate to the junction box, clip the canopy on the exit sign, hang the canopy on the back plate, make your connections using both hands, slide the unit in place, one screw and the job is done!

OPTIONS & ACCESSORIES

ZCB Series Zone Control Box

Introduction

The **Emergi-Lite® ZCB Zone Control Box** is required in buildings where the path of egress for emergency lighting crosses through several areas and each area has a separate electrical circuit and breaker for lighting. In such circumstances a local power failure in one area (zone) may not trigger the emergency lighting connected to a different electrical circuit. The requirement for the zone control function is specified in the National Building Code of Canada and the Canadian Electrical Code:

- NBCC 9.9.12.3. (3) Lighting required in Sentence (1) shall be designed to be automatically actuated for a period of at least 30 min when the electric lighting in the affected area is interrupted.
- CEC C22.1-12 46-304 (4) Unit equipment shall be installed in such a manner that it will be automatically actuated upon failure of the power supply to the normal lighting in the area covered by that unit equipment.

Description

The ZCB has several inputs to detect the AC voltage of each zone. It will activate all the emergency lighting if at least one zone becomes de-energized through either a power failure or lighting circuit breaker tripping. This greatly enhances the life safety system, as any failure of a lighting circuit will ensure emergency egress lighting in the entire building. As an optional feature, the ZCB can include test buttons and/or pilot lights, enabling individual testing of each zone circuit monitored. The ZCB can be included as an option in the **Emergi-Lite®** emergency lighting battery unit, with maximum 6 zone circuits. For a larger number of zones the ZCB is available in a separate enclosure (extension module).

Typical specifications

ZCB Zone Control stand-alone extension module

Supply and install Emergi-Lite® ZCB Series Model_ of Zone Control Box. The equipment shall have _ (maximum 24) inputs for line voltage detection from different building zones. The wire connection from each zone circuit shall be made with terminal blocks. The value of each zone _____ VAC. The output circuit shall be a voltage shall be: ____ dry-contact relay, normally closed and shall be accessible for connection on a terminal block. The output circuit shall be connected at installation in series with the AC line supplying the battery unit equipment. The value of output line voltage shall be: ____ ___ VAC. In the case of power failure of one or several zones the output circuit will open and transfer the battery unit(s) in emergency lighting mode. When specified the equipment shall include a 'push to test' push button and/ or a pilot light for each zone circuit for manual testing and service. The unit shall be certified CSA 22.2 No.141-10.

The unit shall be Emergi-Lite® model: _

Battery unit equipment with ZCB Zone Control option

When specified, the equipment shall have ______ (maximum six) inputs for line voltage detection from different building zones. The wire connection from each zone circuit shall be made with terminal blocks. The value of each zone voltage shall be: ______ VAC. In the case of a power failure of one or several zones the circuit will transfer the battery unit to emergency lighting mode for minimum 30 minutes. When specified the equipment shall include a 'push to test' push button and/or a pilot light for each zone circuit for manual testing and service. The unit shall be certified CSA 22.2 No.141-10.

The unit shall be Emergi-Lite® model: _

Nexus®RF Wireless and wired solutions for safer buildings

The Nexus®RF system has been designed to enable maintenance personnel to easily test and maintain the emergency lighting system.

Nexus°RF provides building owners and managers with the tools to effectively manage emergency lighting including:

- Conduct all testing remotely without having to disrupt the power supply.
- Monitor emergency lighting in a number of facilities from one location.
- Plan maintenance activities based on real-time unit status.
- Maintain maintenance logs and generate reports to comply with the Building and Life Safety code.
- Manage installations and component removal.
- Eliminate emergency lighting testing cost.

Nexus® is available in two separate configurations:

- 1. Nexus®Wired: a cabled system designated which utilises the LonWorks protocol and relies upon data cable for communication between units and network infrastructure. A server computer, running Nexus® software, provides the user interface to the system.
- 2. Nexus®RF: a wireless system which uses a proprietary protocol for radio frequency wireless communication between the units and network infrastructure. This system does not require a server computer, nor does it require data cabling to units. User interaction with Nexus®RF is via a website browser on any computer with access to the network.

Nexus[®]Pro Smarter Technology. Safer Lives

Nexus[®]Pro is an IoT emergency lighting system designed to enable building owners and managers to easily maintain and test emergency lighting, without the need to visually verify performance or disrupt the power supply.

With digital solutions, building owners now can have peace of mind knowing their buildings are safer than ever. All operations can be managed remotely, giving building owners and managers complete control wherever they are, whenever they need it most while preventing any human error in the process.

- Reduces human error while enhancing safety for all building occupants by meeting code and compliance and 24/7 monitoring.
- User-friendly app makes emergency lighting management easier and more efficient while reducing your maintenance costs.
- ABB Gateway keeps your fixtures secure from development to deployment. Nexus® Pro uses Bluetooth mesh technology to exchange data between your emergency lighting devices.
- Easily go from one building to many. Nexus®Pro gateway can establish a secure wireless connection with up to 200 emergency lighting units.
- Available offering for educational, institutional, high security, architectural, healthcare and industrial applications. Nexus®Pro can fit any scale of project to meet different budgets.

The system can bring connected lighting to architectural, commercial, institutional, high-security, healthcare, and industrial locations.

You can simply monitor any of your building installations from anywhere at any time to suit you and concentrate your resources where they are most needed. Nexus®Pro grows with you and puts you in total control.

Wire size guide

When remote fixtures and exit signs are connected to emergency lighting units of less than 50 volts, circuit runs must be sufficient size to maintain a proper operating voltage to all lamps. The maximum allowable voltage drop should not exceed 5%. Proper wire size can be selected from the following table or by use of the following formula:

	CM = Wire size in circular mills	E= Line voltage
CM = 22 x W x L .05 x E2	W = Emergency load in watts	22= Constant
	L= Length of circuit in feet	.05= Factor for max. allowable voltage drop

Length of wire run (in feet)

Electrical Code

Extracts from the Canadian Electrical Code 2015

Section 46 — Emergency power supply, unit equipment, exit signs, and life safety systems

46-000 Scope (see Appendix B)

- 1 This Section applies to the installation, operation, and maintenance of
 - (a) emergency power supply and unit equipment intended to provide power to life safety systems; and
 - (b) emergency power supply and unit equipment intended to provide illumination of exit signs, in theevent of failure of the normal supply, where the emergency power supply is required by the NationalBuilding Code of Canada.
- 2 This Section applies to the wiring between the emergency power supply and life safety systems that are required by the National Building Code of Canada to be provided with an emergency power supply
- 3 This Section applies to the wiring of exit signs
- 4 The requirements of this Section supplement or amend the general requirements of this Code
- 46-002 Special terminology (see Appendix B)

In this Section, the following definitions apply:

Emergency power supply

Emergency power, supplied by a generator, batteries, or a combination thereof, that is required by the National Building Code of Canada.

Life safety systems

Emergency lighting and fire alarm systems that are required to be provided with anemergency power supply from batteries, generators, or a combination thereof, and electrical equipment for building services such as fire pumps, elevators, smoke-venting fans, smoke control fans, and dampers that are required to be provided with an emergency power supply by an emergency generator in conformance with the National Building Code of Canada.

Unit equipment

Unit equipment for emergency lighting conforming to CSA C22.2 No. 141.

General

46-100 Capacity

Emergency power supply and unit equipment shall have adequate capacity and rating to ensure the satisfactory operation of all connected equipment when the principal source of power fails.

46-102 Instructions

- 1 Complete instructions for the operation and care of an emergency power supply or unit equipment that shall specify testing at least once every month to ensure security of operation shall be posted on the premises in a frame under glass.
- 2 The form of instructions and their locations shall be in compliance with the National Building Code of Canada.

46-104 Maintenance

Where batteries are used as a source of the emergency power supply, the batteries shall be kept

- (a) in proper condition; and
- (b) fully charged at all times

46-106 Arrangement of lamps

- 1 Emergency lights shall be arranged so that the failure of any one lamp will not leave in total darkness the area normally illuminated by it.
- 2 No appliance or lamp, other than those required for emergency purposes, shall be supplied by the emergency circuits.

46-108 Wiring method (see Appendices B and G)

- 1 Except as permitted by Subrule (3), Rule 46-304(3), and Rule 46-400(2), the following conductors shall be installed in accordance with Subrule (2):
 - (a) conductors required for operation of life safety systems and installed between an emergency power supply and life safety systems;
 - (b) conductors between an emergency power supply and exit signs; and
 - (c) conductors between unit equipment and remote lamps.
- 2 Conductors described in Subrule (1) shall be
- (a) installed in metal raceway of the totally enclosed type;
- (b) incorporated in a cable having a metal armour or sheath;
- (c) installed in rigid non-metallic conduit; or
- (d) installed in electrical non-metallic tubing where embedded in at least 50 mm of masonry or poured concrete.
- 3 Not with standing Subrule (2), conductors installed in buildings of combustible construction in accordance with Rules 12-506 to 12-520 shall be permitted to be
 (a) run as a non-metallic-sheathed cable; or
 (b) installed in a totally enclosed non-metallic raceway.
- 4 Conductors installed in accordance with Subrule (1) shall be kept entirely independent of all other conductors and equipment and shall not enter a luminaire, raceway, box, cabinet, or unit equipment occupied by other conductors except where necessary (a) in transfer switches; and

(b) in exit signs and emergency lights supplied from two sources.

5 Conductors between an emergency power supply and any electrical equipment that is not defined as a "life safety system" in accordance with this Section shall not enter a luminaire, raceway, box, or cabinet occupied by conductors installed as described in Subrule (1), except where necessary in busways, splitters, and other similar enclosures provided for connection to the overcurrent device for an emergency power supply described in Rule 46-208(1).

Emergency power supply

46-200 Emergency power supply (see Appendix B)

Rules 46-202 to 46-212 apply only to emergency power supply from central standby power sources.

46-202 Types of emergency power supply (see Appendix G)

- The emergency power supply shall be a standby supply consisting of

 (a) a storage battery of the rechargeable type having sufficient
 capacity to supply and maintain at not less than 91% of full voltage
 the total load of the emergency circuits for the time period
 required by the National Building Code of Canada, but in no case
 less than 30 min, and equipped with a charging means to maintain
 the battery in a charged condition automatically; or
 (b) a generator.
- 2 Automobile batteries and lead batteries not of the enclosed glass-jar type are not considered suitable under Subrule (1) and shall be used only where a deviation has been allowed in accordance with Rule 2-030.
- 3 Where a generator is used, it shall be
 - (a) of sufficient capacity to carry the load;
 - (b) arranged to start automatically without failure and without undue delay upon the failure of the normal power supply to any transfer switch connected to this generator; and
 - (c) in conformance with CSA C282.

Electrical Code

Extracts from the Canadian Electrical Code 2015

46-204 Protection of electrical conductors (see Appendices B and G)

All power, control, and communication conductors between an emergency generator as described in Rule 46-202(3), and electrical equipment required to be installed as a part of the emergency power supply and located outside the generator room shall be protected against fire exposure to provide continued operation in compliance with the National Building Code of Canada.

46-206 Control

- 1 An emergency power supply shall be controlled by automatic transfer equipment that actuates the emergency power supply upon failure of the normal current supply and that is accessible only to authorized persons.
- 2 An automatic light-actuated device, approved for the purpose, shall be permitted to be used to control separately the lights located in an area that is adequately illuminated during daylight hours without the need for artificial lighting.

46-208 Overcurrent protection

- 1 The overcurrent device for an emergency power supply shall be coordinated with the overcurrent devices of feeders and branch circuits supplying life safety systems and other electrical equipment connected to the emergency power supply in order to provide selective operation of the branch circuit overcurrent device when a fault occurs in that branch circuit.
- 2 The branch circuit overcurrent devices shall be accessible only to authorized persons.

46-210 Audible and visual trouble-signal devices

- 1 Every emergency power supply shall be equipped with audible and visual trouble-signal devices that warn of derangement of the current source or sources and that indicate when exit signs or life safety systems are supplied from the emergency power supply.
- 2 Audible trouble signals shall be permitted to be wired so that
 (a) they can be silenced, but a red warning or trouble light shall continue to provide the protective function; and
 - (b) when the system is restored to normal, the audible signal will
 (i) sound, indicating the need to restore the silencing switch to its normal position; or
 - (ii) reset automatically so as to provide sound for any subsequent operation of the emergency power supply.

46-212 Remote lamps

Lamps shall be permitted to be mounted at some distance from the current supply that feeds them, but the voltage drop in the wiring feeding such lamps shall not exceed 5% of the applied voltage.

Unit equipment

46-300 Unit equipment (see Appendix B)

Rules 46-302 to 46-306 apply to individual unit equipment for emergency lighting only.

46-302 Mounting of equipment

Each unit equipment shall be mounted with the bottom of the enclosure not less than 2 m above the floor, wherever practicable.

46-304 Supply connections

Each unit equipment shall be mounted with the bottom of the enclosure not less than 2 m above the floor, wherever practicable.

1 Receptacles to which unit equipment is to be connected shall be not less than 2.5 m above the floor, where practicable, and shall be not more than 1.5 m from the location of the unit equipment.

- 2 Unit equipment shall be permanently connected to the supply if(a) the voltage rating exceeds 250 V; or(b) the marked input rating exceeds 24 A.
- 3 Where the ratings in Subrule (2) are not exceeded, the unit equipment shall be permitted to be connected using the flexible cord and attachment plug supplied with the equipment.
- 4 Unit equipment shall be installed in such a manner that it will be automatically actuated upon failure of the power supply to the normal lighting in the area covered by that unit equipment.

46-306 Remote lamps (see Appendix B)

- 1 The size of circuit conductors to remote lamps shall be such that the voltage drop does not exceed 5% of the marked output voltage of the unit equipment, or such other voltage drop for which the performance of unit equipment is certified when connected to the specific remote lamp being installed.
- 2 Remote lamps shall be suitable for remote connection and shall be included in the list of lamps provided with the unit equipment.
- 3 The number of lamps connected to a single unit equipment shall not result in a load in excess of the watts output rating marked on the equipment for the emergency period required by the National Building Code of Canada, and the load shall be computed from the information in the list of lamps referred to in Subrule (2).

Exit signs

46-400 Exit signs

Location requirements for exit signs are set out in the NBCC. Rule 46-400 covers only their connection to a power supply. Rule 46-400 also covers connection of circuits supplying lighting in the area where externally illuminated exit signs are installed in accordance with the NBCC requirements.

If an exit sign is required by the NBCC and is electrically illuminated, Subrule (1) requires that the power for the exit sign be provided by a branch circuit that supplies only other exit signs.

Subrule (2) exempts the circuit supplying only exit signs to allow it to supply emergency lighting in the area where the exit signs are located.

However, in an area where exit signs are installed and where emergency lighting is required by the NBCC or local building codes, Subrule (3) requires that exit signs must also be illuminated by an emergency power supply. This ensures that the exit sign is provided with a minimum illumination whenever the emergency lighting is energized.

Subrule (4) requires that the luminaires used to illuminate exit signs are to meet the circuit requirements of Subrule (1) and (2) and the illumination requirements of Subrule (3).

Note (2) to Rule 46-400 in Appendix B cautions that the circuit supplying both emergency lighting and exit signs not be controlled by a switch, time clock, or other disconnecting means.

Building Code

Extracts from the National Building Code of Canada 2015

3.2.6. Requirements for High Buildings

3.2.6.1. Application

- 1 This Subsection applies to a building
 - a) of Group A, D, E or F major occupancy classification that is more than
 - i) 36 m high, measured between grade and the floor level of the top storey, or
 - ii) 18 m high, measured between grade and the floor level of the top storey, and in which the cumulative or total occupant load on or above any storey above grade, other than the first storey, divided by 1.8 times the width in metres of all exit stairs at that storey, exceeds 300,
 - b) containing a Group B major occupancy in which the floor level of the highest storey of that major occupancy is more than 18 m above grade,
 - c) containing a floor area or part of a floor area located above the third storey designed or intended as a Group B, Division 2 or 3 occupancy, or
 - d) containing a Group C major occupancy whose floor level is more than 18 m above grade.

3.2.7.3. Emergency Lighting

- 1 Emergency lighting shall be provided to an average level of illumination not less than 10 lx at floor or tread level in a) exits
 - b) principal routes providing access to exit in open floor areas and in service rooms,
 - c) corridors used by the public,
 - d) corridors serving sleeping rooms in a treatment occupancy,
 - e) corridors serving sleeping rooms in a care occupancy, except corridors serving sleeping rooms within individual suites of care occupancy,
 - f) corridors serving classrooms,
 - g) underground walkways,
 - h) public corridors,
 - i) floor areas or parts thereof where the public may congregate i) in Group A. Division 1 occupancies, or
 - ii) in Group A, Division 2 and 3 occupancies having an occupant load of 60 or more,
 - j) floor areas or parts thereof of daycare centreswhere persons are cared for, and
 - k) food preparation areas in commercial kitchens.
- 2 Emergency lighting to provide an average level of illumination of not less than 10 lx at floor or catwalk level shall be included in a service space referred to in Sentence 3.2.1.1.(8).
- 3 The minimum value of the illumination required by Sentences (1) and (2) shall be not less than 1 $\rm lx.$
- 4 In addition to the requirements of Sentences (1) to (3), the installation of battery-operated emergency lighting in buildings or part thereof where treatment is provided shall conform to the appropriate requirements of CSA Z32, "Electrical Safety and Essential Electrical Systems in Health Care Facilities".

3.2.7.4. Emergency Power for Lighting

- 1 An emergency power supply shall be
 - a) provided to maintain the emergency lighting required by this Subsection from a power source such as batteries or generators that will continue to supply power in the event that the regular power supply to the building is interrupted, and
 - b) so designed and installed that upon failure of the regular power it will assume the electrical load automatically for a period of
 - i) 2 h for a building within the scope of Subsection 3.2.6.,
 - ii) 1 h for a building of Group B major occupancy classification that is not within the scope of Subsection 3.2.6., and
 - iii) 30 min for a building of any other occupancy. (See Appendix A.)
- 2 If self-contained emergency lighting units are used, they shall conform to CSA C22.2 No. 141, "Emergency Lighting Equipment."

3.2.7.5. Emergency Power Supply Installation

1 Except as required by Articles 3.2.7.6. and 3.2.7.7., an emergency electrical power supply system shall be installed in conformance with CAN/CSA- C282, "Emergency Electrical Power Supply for Buildings." (See Sentence 3.2.7.8.(1) for emergency electrical power supply for voice communication systems).

3.4.5. Exit Signs

3.4.5.1. Exit Signs

- 1 Every exit door shall have an exit sign placed over or adjacent to it if the exit serves
 - a) a building more than 2 storeys in building height,
 - b) a building having an occupant load of more than 150, or
 - c) a room or floor area that has a fire escape as part of a required means of egress

2 Every exit sign shall

- a) be visible on approach to the exit,
- b) Consist of a green pictogram and a white or lightly tinted graphical symbol meeting the colour specifications referred to in ISO 3864-1, "Graphical symbols – Safety colours and safety signs – Part 1: Design principles for safety signs and safety markings," and
- c) conform to ISO 7010, "Graphical symbols Safety colours and safety signs – Registered safety signs" for the following symbols (see Note A-3.4.5.1 (2)(c)):
 - i) E001 emergency exit left,
 - ii) E002 emergency exit right,
 - iii) E005 90-degree directional arrow, and
 - iv) E006 45-degree directional arrow

3 Internally illuminated exit signs shall be continuously illuminated and

- a) where illumination of the sign is powered by an electrical circuit, be constructed in conformance with CSA C22.2 No. 141, "Emergency Lighting Equipment," or
- b) where illumination of the sign is not powered by an electrical circuit, be constructed in conformance with CAN/ULC-S572, "Photoluminescent and Self-Luminous Signs and Path Marking Systems."
- 4 Externally illuminated exit signs shall be continuously illuminated and be constructed in conformance with CAN/ULC-S572, "Photoluminescent and Self-Luminous Signs and Path Marking Systems." (see Note A-3.4.5.1(4).)
- 5 The circuitry serving lighting for externally and internally illuminated exit signs shall
 - a) serve no equipment other than emergency equipment, andb) be connected to an emergency power supply as described in Article 3.2.7.4.

Building Code

Extracts from the National Building Code of Canada 2015

- 6 Where no exit is visible from a public corridor, from a corridor used by the public in a Group A or B major occupancy, or from principal routes serving an open floor area having an occupant load of more than 150, an exit sign conforming to Clauses (2)(b) and (c) with an arrow or pointer indicating the direction of egress shall be provided.
- 7 Except for egress doorways described in Sentence 3.3.2.4.(4), an exit sign conforming to Sentences (2) to (5) shall be placed over or adjacent to every egress doorway from rooms with an occupant load of more than 60 in Group A, Division 1 occupancies, dance halls, licensed beverage establishments, and other similar occupancies that, when occupied, have lighting levels below that which would provide easy identification of the egress doorway.

3.4.5.2. Signs for Stairs and Ramps at Exit Level

1 In a building more than 2 storeys in building height, any part of an exit ramp or stairway that continues up or down past the lowest exit level shall have a posted sign clearly indicating that it does not lead to an exit.

9.9.11. Signs

9.9.11.1. Application

1 This Subsection applies to all exits except those serving not more than one dwelling unit or a house with a secondary suite.

9.9.11.2. Visibility of Exits

- 1 Exits shall be located so as to be clearly visible or their locations shall be clearly indicated.
- 2 Where an exit door leading directly to the outside is subject to being obstructed by parked vehicles or storage because of its location, a visible sign or a physical barrier prohibiting such obstruction shall be installed or the exterior side of the door.

9.9.11.3. Exit Signs

- 1 Every exit door shall have an exit sign placed over it or adjacent to it if the exit serves
 - a) a building that is 3 storeys in building height,
 - b) a building having an occupant load of more than 150, or
 - c) a room or floor area that has a fire escape as part of a required means of egress.
- 2 Every exit sign shall
 - a) be visible on approach to the exit,
 - b) Consist of a green pictogram and a white or lightly tinted graphical symbol meeting the colour specifications referred to in ISO 3864-1, "Graphical symbols – Safety colours and safety signs – Part 1: Design principles for safety signs in workplaces and public areas," and
 - c) conform to the dimensions indicated in ISO 7010, "Graphical symbols Safety colours and safety signs for the following symbols (see A-3.4.5.1.(2)(c)
 - i) E001 emergency exit left,
 - ii) E002 emergency exit right,
 - iii) E005 90-degree directional arrow, and
 - iv) E006 45-degree directional arrow.
- 3 Internally illuminated exit signs shall be continuously illuminated and
 - a) where illumination of the sign is powered by an electrical circuit, be constructed in conformance with CSA C22.2 No. 141, "Emergency Lighting Equipment," or
 - b) where illumination of the sign is not powered by an electrical circuit, be constructed in conformance with CAN/ULC-S572, "Photoluminescent and Self-Luminous Signs and Path Marking Systems."

- 4 Externally illuminated exit signs shall be continuously illuminated and be constructed in conformance with CAN/ULC-S572, "Photoluminescent and Self-Luminous Signs and Path Marking Systems." (See A-3.4.5.1.(4)
- 5 The circuitry serving lighting for externally and internally illuminated exit signs shall

a) serve no equipment other than emergency equipment, and
b) be connected to an emergency power supply as described in Sentences 9.9.12.3.(2), (3) and (7).

6 Where no exit is visible from a public corridor, from a corridor used by the public, or from principal routes serving an open floor area having an occupant load of more than 150, an exit sign conforming to Clauses (2)(b) and (c) with an arrow or pointer indicating the direction of egress shall be provided.

9.9.11.4. Signs for Stairs and Ramps at Exit Level

1 In buildings that are 3 storeys in building height, any part of an exit ramp or stairway that continues up or down past the lowest exit level shall be clearly marked to indicate that it does not lead to an exit, if the portion beyond the exit level may be mistaken as the direction of exit travel.

9.9.12. Lighting

9.9.11.4. Signs for Stairs and Ramps at Exit Level

1 This Subsection applies to the lighting of all means of egress except those within dwelling units or a house with a secondary suite.

9.9.12.2. Required Lighting in Egress Facilities

- 1 Every exit, public corridor or corridor providing access to exit for the public shall be equipped to provide illumination to an average level of not less than 50 lx at floor or tread level and at all points such as angles and intersections at changes of level where there are stairs or ramps.
- 2 The minimum value of the illumination required by Sentence (1) shall be not less than 10 \mbox{lx}

9.9.12.3. Emergency Lighting

- 1 Emergency lighting shall be provided in
 - a) exits,b) principal routes providing access to exit in an open floor area,c) corridors used by the public,
 - d) underground walkways, and
 - e) public corridors.
- 2 Emergency lighting required in Sentence (1) shall be provided from a source of energy separate from the electrical supply for the building.
- 3 Lighting required in Sentence (1) shall be designed to be automatically actuated for a period of at least 30 min when the electric lighting in the affected area is interrupted.
- 4 Illumination from lighting required in Sentence (1) shall be provided to average levels of not less than 10 lx at floor or tread level.
- 5 The minimum value of the illumination required by Sentence (4) shall be not less than 1 lx.
- 6 Where incandescent lighting is provided, lighting equal to 1 W/m2 of floor area shall be considered to meet the requirement in Sentence (4).
- 7 Where self-contained emergency lighting units are used, they shall conform to CSA C22.2 No. 141, "Emergency Lighting Equipment."

_

204

Building Code Extracts from the National Building Code of Canada 2015

Appendix A

Explanatory material

A-3.1.2. Use Classification

The purpose of classification is to determine which requirements apply.

This Code requires classification in accordance with every major occupancy for which the building is used or intended to be used. Where necessary, an application clause has been inserted in this Part to explain how to choose between the alternative requirements which multiple occupancy classification may present.

A-3.1.2.1.(1) Major Occupancy Classification

The following are examples of the major occupancy classifications described in Table 3.1.2.1.:

Examples		Group	Division
Motion picture theatres Opera houses Television studios admitting a viewing audience Theatres, including experimental theatres		A	1
Art galleries Auditoria Bowling alleys Churches and similar places of worship Clubs, nonresidential Community halls Courtrooms Dance halls Exhibition halls (other than classified in Group E) Gymnasia	Lecture halls Libraries Licensed beverage establishments Museums Passenger stations and depots Recreational piers Restaurants Schools and colleges, nonresidential Undertaking premises	Α	2
Arenas Indoor swimming pools, with or without spectator seating Rinks		A	3
Amusement park structures (not elsewhere classified) Bleachers Grandstands	Reviewing stands Stadiums	A	4
Jails Penitentiaries Police stations with detention quarters	Prisons Psychiatric hospitals with detention quarters Reformatories with detention quarters	В	1
Care facilities with treatment Convalescent /recovery/rehabilitation centres with treatment Hospices with treatment Hospitals	Infirmaries Nursing homes with treatment Psychiatric hospitals without detention quarters Respite centres with treatment	В	2
Assisted/supportive living facilities Care facilities without treatment Children's custodial homes Convalescent/recovery/rehabilitation centres without treatment	Group homes Hospices without treatment Nursing homes without treatment Reformatories without detention quarters Respite centres without treatment	В	3
Apartments Boarding houses Clubs, residential Colleges, residential Convents Dormitories	Hotels Houses Lodging houses Monasteries Motels Schools, residential	с	
Banks Barber and hairdressing shops Beauty parlours Dental offices Dry cleaning establishments, self-service, not using flammable or explosive solvents or cleaners Laundries, self-service	Medical offices Offices Police stations without detention quarters Radio stations Small tool and appliance rental and service establishments	D	

Building Code

Extracts from the National Building Code of Canada 2015

Examples		Group	Division
Department stores Exhibition halls Markets	Shops Stores Supermarkets	E	
Bulk plants for flammable liquids Bulk storage warehouses for hazardous substances Cereal mills Chemical manufacturing or processing plants Distilleries Dry cleaning plants Feed mills	Flour mills Grain elevators Lacquer factories Mattress factories Paint, varnish and pyroxylin product factories Rubber processing plants Spray painting operations Waste paper processing plants	F	1
Aircraft hangars Box factories Candy plants Cold storage plants Dry cleaning establishments not using flammable or explosive solvents or cleaners Electrical substations Factories Freight depots Helicopter landing areas on roofs Laboratories Laundries, except self-service Mattress factories Planing mills	Printing plants Repair garages Salesrooms Service stations Storage rooms Television studios not admitting a viewing audience Warehouses Wholesale rooms Woodworking factories Workshops	F	2
Creameries Factories Laboratories Light-aircraft hangars (storage only) Power plants Salesrooms	Sample display rooms Storage garages, including open air parking garages Storage rooms Warehouses Workshops	F	3

A-3.4.5.1.(2)(C) Graphical Symbols for Exit Signs

ISO 7010, "Graphical" symbols – Safety colours and safety signs – Registered safety signs" identifies the following internationally recognized symbols for use at required exits

"Emergency exit RIGHT" (E001) symbol from ISO 7010

Figure A-3.4.5.1.(2)(C)-B 90-degree directional arrow (E005) from ISO 7010 A-3.4.5.1.(4) Externally Illuminated Signs An external lighting source is required to properly charge photoluminescent signs. These types of signs must be lit in conformance with the charging requirements stated in CAN/ULC-S572.

A-3.4.6. Application to Means of Egress

The requirements in Subsection 3.4.6. apply to interior and exterior exits, as well as to ramps, stairways and passageways used by the public as access to exit. The treads, risers, landings, handrails and guards for the latter access to exit facilities must thus be provided in conformance with the appropriate requirements for exit facilities.

Fire Code Extracts from the National Fire Code of Canada 2015

2.7. Safety to Life

2.7.3. Exit Lighting, Exit Signs and Emergency Lighting

2.7.3.1. Installation and Maintenance

- 1) Exit lighting, exit signs and emergency lighting shall be provided in buildings in conformance with the NBC. (See Note A-2.37.3.1.(1).)
- Exit lighting and exit signs shall be illuminated during times when the building is occupied.
- 3) Emergency lighting shall be maintained in operating condition, in conformance with Section 6.5.

6.5. Emergency Power Systems and Unit Equipment for Emergency Lighting

6.5.1 General

6.5.1.1. Inspection, Testing and Maintenance

- Except as provided in Articles 6.5.1.2. to 6.5.1.5., emergency power systems shall be inspected, tested and maintained in conformance with CSA-C282, "Emergency Electrical Power Supply for Buildings."
- 2) An emergency electrical power supply system for emergency equipment for health care facilities shall be inspected, tested and maintained in conformance with CSA Z32, "Electrical Safety and Essential Electrical Systems in Health Care Facilities." (See Appendix A.)

6.5.1.2. Notification

1) When an emergency power system or any part thereof is shut down, the supervisory staff shall be notified in conformance with Section 2.8.

6.5.1.3. Instructions

1) Where an emergency power system is installed, instructions shall be provided for switching on essential loads and for starting the generator when this is not done automatically.

6.5.1.4. Records

1) Written records shall be maintained as required in CAN/CSA-C282, "Emergency Electrical Power Supply for Buildings".

6.5.1.6. Inspection of Unit Equipment

- 1) Self-contained emergency lighting unit equipment shall be inspected at intervals not greater than one month to ensure that
- a) pilot lights are functioning and not obviously damaged or obstructed,
- b) the terminal connections are clean, free of corrosion and lubricated when necessary,
- c) the terminal clamps are clean and tight as per manufacturer's specifications, and
- d) the battery surface is kept clean and dry.
- Self-contained emergency lighting unit equipment shall be tested

 a) at intervals not greater than one month to ensure that the
 emergency lights will function upon failure of the primary power
 supply, and
 - b) at intervals not greater than 12 months to ensure that the unit will provide emergency lighting for a duration equal to the design criterion under simulated power failure conditions.
- 3) After completion of the test required in Clause (2)(b), the charging conditions for voltage and current and the recovery period shall be tested to ensure that the charging system is functioning in accordance with the manufacturer's specifications.

6.5.1.7. Inspection of Emergency Lights

1) Except as provided in Article 6.5.1.6., emergency lights shall be inspected at intervals not greater than 12 months to ensure that they are functional. **Generator Room**

Extracts from the Canadian Standards Association 2015

Section 6.11

Emergency Lighting

6.11.1

The emergency electrical power supply room and the automatic transfer switch room, where separate, shall be equipped with unit equipment for emergency lighting that complies with CSA C22.2 No. 141. Sufficient lamps shall be provided to ensure that a minimum lighting level of 50 lx for 2h is available at all equipment locations requiring adjustment or service.

Note: This illumination level is significantly greater than that specified in the NBCC, which requires 10 lx for egress route emergency lighting

6.11.2

Emergency lighting units shall be tested in accordance with Table 2 and CSA C22.2 No. 141.

6.11.3

The emergency lighting unit shall include

- (a) automatic self-diagnostic circuitry; and
- (b) a transient voltage surge suppressor on the supply side of power to the unit.
